Login Security Settings - Start here

Last Modified on 07/28/2026 4:51 pm CDT

The Login Security Settings tool allows you to control whether Staff users receive login alert notification emails and whether they must verify their identity with a one-time code or an authentication application.

How-to guides

Enable Settings

- New device notification settings
- Multi-factor authentication options
- Captcha settings
- Enable suspicious login attempts mitigation
- Enable PIV authentication
- View all active sessions and log out/disable user accounts

Reset Account Settings

- Reset a user's multi-factor authentication credentials

PIV Card Registration Process

- For administrators
- For staff members
