Java Security Update Requiring Campus.2647 or Greater by March 2027

Last Modified on 11/09/2026 3:32 pm CST

In our ongoing efforts to keep our product and customer sites secure, we will change how our update functions in March 2027, requiring all districts to be on Campus.2647.X or greater to maintain seamless functionality.

These updates will be necessary for all districts, as the current version of our underlying Java system will be sunset by March 2027, and no longer be supported. All customers will need to take **AT LEAST** Campus.2647.X or greater between now and March 19, 2027.

Any district still using a Campus version older than Campus.2647.X **will be automatically updated to the latest Campus version on March 19, 2027.**

These updates are necessary because when the Java system is sunsetted, it will no longer receive critical security patches for vulnerabilities. This is why we will be forcing all districts that **ARE NOT** on Campus.2647.X or greater by March 19, 2027, to the latest available Campus version.

If you have any questions, please reach out to Infinite Campus Support.

We want to thank you for your continued partnership in using our services and your commitment to maintaining a robust and secure SIS for your district.
