BIE 30 Day Residential Attendance Report Editor

Report Logic

This report uses the following business logic:

- The report is calculated based on the reporting calendar's first instructional/attendance date.
- Using the first instructional/attendance date, the report will calculate 30 calendar days after this date to determine the first reporting period, adding another 30 days for each subsequent period.
- Reported data will first alphabetically sort students in a residence and then filter students who are not.
 - A student in residence is defined as one who is in attendance for 10 days within each 30-day reporting period.
- Days that are not active school days in the calendar are shaded gray on the report.
- Only students with an enrollment record in a residential calendar are considered for the report.
- Only one record reports per student regardless of the number of same-calendar enrollment records the student has in the 30-day reporting range.
 - If a student has multiple enrollments in more than one calendar, one student record is reported per calendar.

Student Requirements

Students must meet the following criteria to report:

- Only students enrolled in a BIE regional grade level 01 through 12 are included in the report. Kindergarten, Pre-Kindergarten, early childhood, Face, and Baby Face students are excluded from the report.
- To be included in the report, students must have an enrollment record with an Enrollment Type = 1: ISEP.
 - If the student has multiple enrollment records, only those marked as ISEP are reported.
- If a student is not scheduled into the second instructional period, they are flagged as not eligible on the report since they are not considered present for the midnight bedcheck.
- 'No Show' enrollments are excluded from reporting.

Attendance Calculation

Attendance data is calculated using the following criteria:

- Students who are in residence for at least 10 days during each 30-day calendar day period will be considered to have met residency requirements and are considered for the report.
- For a student to be counted as in residence for a day, the student must be present at the midnight bedcheck (marked in attendance for the second instructional period).
- The report looks at the Attendance module within NASIS to determine whether a student was in residence (attendance) for a specific day.
- Students marked absent for the "midnight bedcheck" with an excuse code of Unknown, Unexcused, or Excused are not reported as in residence.
- Students marked absent with an excuse code of Exempt are included in the report as in residence and reported on the report for the reporting day.
- The report distinguishes non-official bed checks based on the non-instructional flag set on the period. The first period marked instructional and any periods flagged as non-instructional will not be reported.
 - The afterschool bedcheck and midnight bedcheck are the only official bedchecks.

Generate the Extract

1. Select the **Calendar** reporting data.
2. Select the **Report Type**: Student Detail Attendance or Student Summary Attendance
3. Select the attendance **Period** reporting data.
4. Select the **Sort Option**:
 - **All grades combined in alpha order**: All students are reported alphabetically, regardless of grade.
 - **By grade and then alpha order**: Students are sorted by grade and alphabetically within each grade.
5. Select which **Grade(s)** to have data reported.
6. Select an **Ad Hoc Filter** to filter reported data further (optional).
7. Click the **Generate Report** button. The report will appear in a separate window in PDF format.
