Tool Search: PIMS Extracts

This PIMS Course Template reports the attributes of each course at each school.

See the [PIMS Reporting](#) article for additional PIMS Reporting information.

The screenshot shows the 'PIMS Extracts' interface with the following sections:

- PA PIMS State Extracts**: A header section with a description: 'This tool will extract data to complete the PA-defined PIMS extracts. Choose the State Format to get the file in the state defined comma-delimited format, otherwise choose one of the testing/debugging formats.'
- Extract Options**:
 - Extract Type:
 - Reporting Period:
 - Effective Date:
 - Prior Reporting Date:
 - Format:
 - Course Ad Hoc Filter:
 - Buttons:
- Select Calendars**:
 - Radio buttons: ☒ active year, ☐ list by school, ☐ list by year
 - Dropdown list of schools:
 - 2020-21 ABBOTT ELEMENTARY
 - 2020-21 BRYANT ELEMENTARY
 - 2020-21 CHOWEN MIDDLE
 - 2020-21 DREW MIDDLE
 - 2020-21 EMERSON HIGH

PIMS Course Template

Report Logic

This template includes all courses offered during the school year. Non-academic courses (study halls, lunch, etc.) and special courses (Music, art, health/physical education) are not reported.

A record reports for each unique Location Code Override that is assigned to the students scheduled into those courses. When the Location Code Override field is not populated for the students:

- First, the Location Code reports from the Alt School Number or State School Number field.
- Second, logic looks at each student in the course's sections and finds the students who have an Enrollment Location Code Override value assigned on their Enrollment records.

Only active courses in the calendar and courses in active trials are included in the report.

Report Editor

The following fields are available on the PIMS Course Template.

Field	Description
Extract Type	Determines the type of PIMS Extract being generated.
Reporting Period	Indicates the time of year for which the extract is being generated.
Effective Date	Entered date causes the extract to report all students actively enrolled as of that date and/or all data as of this date. This date entered is considered the end date of the reporting period, unless it is a snapshot extract.
Prior Reporting Date	The entered date indicates staff who were employed between the entered date and the Effective Date/Reporting Date.
Format	Determines how the extract generates. Extracts can be generated in State Format (comma delimited) or HTML. Use the HTML format for reviewing and verifying data prior to submission to the state. Use the State Format for submitting the data to the Department of Education.
Course Ad hoc Filter	Select an existing ad hoc filter from which to report course information. Only courses and section included in the Course/Section Data Type Filter and that meet the reporting population are included in the extract.
Calendars	At least one calendar must be selected when generating a PIMS extract. Calendars can be selected by the Active Year, by School or by Year. When a calendar is chosen in the Campus toolbar, that calendar is automatically selected.
Report Generation	To generate the report immediately, use the Generate Extract option. To choose when the report generates, use the Submit to Batch option. Submit to Batch is useful when generating the report for several calendars or for larger amounts of data being reported. See the Batch Queue article for more information.

Generate the Course Template

1. Select **Course Template** from the **Extract Type** from the dropdown list.
2. Select the desired **Reporting Period**.
3. Enter the **Effective Date** of the extract in *mmddyy* format or use the calendar icon to select a date.

4. Enter the **Prior Reporting Date** of the extract in *mmddyy* format or use the calendar icon to select a date.
5. Select the **Format** of the extract.
6. Select a **Course Ad hoc Filter** to return only those courses included in that filter.
7. Select the appropriate **Calendar(s)** from which to include data on the extract.
8. Click the **Generate Extract** button or the **Submit to Batch** button, when available. The extract displays in the selected format.
