

RTI Interventions

Last Modified on 03/14/2024 1:20 pm CDT

Classic Path: System Administration > Response to Intervention > Interventions

Search Terms: RTI Interventions

Interventions are set up to provide teachers and staff a set of predefined interventions they can select and use when setting up an RTI plan for a student.

For example, a school has established an intervention for Behavior, Tier 2 requiring the student to use a Check In/Check Out attendance sheet.

Prerequisites:

- [Plan Types](#) must be established (preferably for all Content Areas).

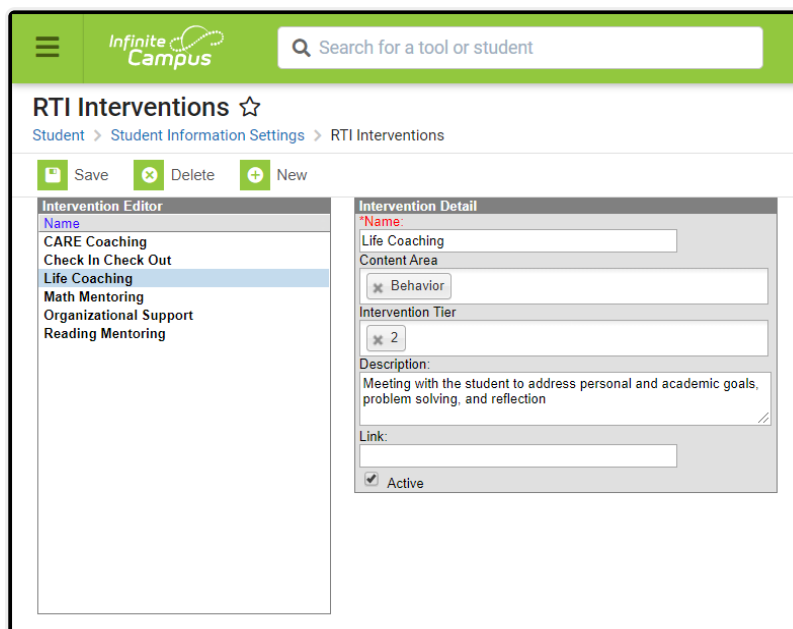

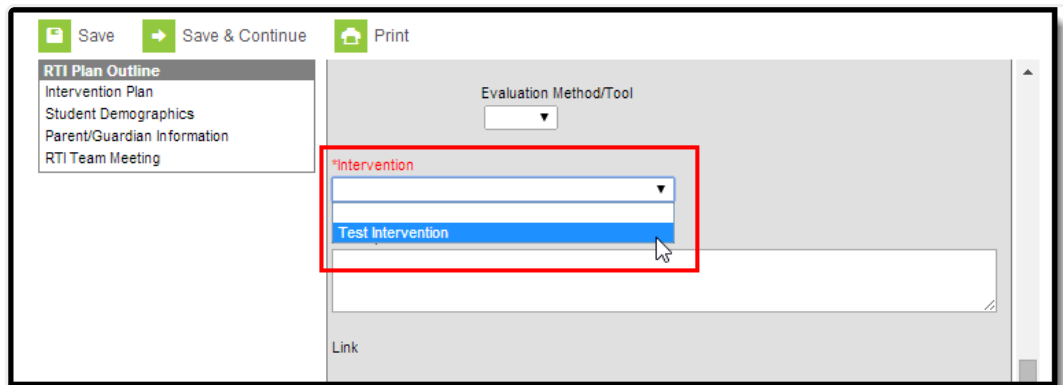

Image 1: RTI Interventions

Create RTI Interventions

1. Select the **New** button. The Intervention Detail editor will appear on the right.
2. Enter the **Name** of the intervention.
3. Enter the **Content Area(s)**. This is important as it ties the intervention to plan types of this same Content Area. The intervention is only available for selection in RTI plans using a plan type which has this same content type.
4. Enter the **Intervention Tier**.
5. Enter a Description of the intervention. This should describe the nature of the intervention and/or any instructions for the user when performing this intervention.
6. Enter a **Link** (if available). This should be a URL link to any materials or websites that should be accessed when performing this intervention.

- Click the **Save** button. This intervention is now available for teachers and staff to select when creating an RTI plan (see Image 2).

The screenshot shows the Infinite Campus RTI Plan form. At the top, there are three buttons: 'Save', 'Save & Continue', and 'Print'. Below these is a sidebar menu with the following items: 'RTI Plan Outline', 'Intervention Plan', 'Student Demographics', 'Parent/Guardian Information', and 'RTI Team Meeting'. The main content area has a section titled 'Evaluation Method/Tool' with a dropdown arrow. Below this is a red-bordered box containing a dropdown menu labeled '*Intervention'. The dropdown menu is open, showing a list of options, with 'Test Intervention' highlighted in blue. A mouse cursor is pointing at the 'Test Intervention' option. Below the dropdown menu is a 'Link' field.
