

Core SIF - AttendanceCodeInfo

Last Modified on 03/19/2024 8:14 am CDT

Tool Search: SIF

The current version of SIF is v2.7.

This object provides information about a particular attendance code, allows applications to synchronize each other's attendance code tables, or provides a dynamic list of attendance codes.

SIF_Events are reported for this object.

Object Triggering

Event Type	Requirement
Add	 When a new Attendance Code is created and saved in System Administration > Attendance > Attendance Codes > Attendance Excuses Editor > Attendance Excuse Detail. Report 2 AttendanceCodeInfo objects associated with the attendance code when Type = A and Excuse is NOT = X (unexcused, blank, unknown or excused). Each AttendanceCodeInfo will have a unique Refld: Object 1: Report the AbsenceValue = 1.0 Object 2: Report the AbsenceValue = 0.5 Report 1 AttendanceCodeInfo object associated with the attendance code when (Status = A and Excuse NOT = X) IS NOT TRUE. There will only be 1 Refld associated with this attendance code: Object 1: Report the AbsenceValue = 0.0 This is meant to communicate that we report a single Refld associated with this Attendance Code when the Attendance Code is not an unexcused, blank, unknown or excused absence. When an attendance code is changed from NOT (Status = A, Excuse NOT = X), both new Reflds must be added. This is meant to communicate that that when the Attendance code is for unexcused absences, we store and report 2 separate Reflds for this Attendance Code. We would not be using the same Refld as we would for the non unexcused absences since those will have an AbsenceValue = 0.0. The Reflds that are for unexcused absences will have AbsenceValue = 0.5 and 1.0.
Change	 When an Attendance Code is changed and saved in System Administration > Attendance > Attendance Codes > Attendance Excuses Editor > Attendance Excuse Detail 1. When an Attendance Code that is generating an object with an AbsenceValue = 1.0 or 0.5 is changed, a CHANGE event must be provided for both objects. • When an Attendance code is changed from (Excuse = X) T1.b, to (Type = A and Excuse NOT = X) TR1a, both new Reflds must be added for: 1. Object 1: Report the AbsenceValue = 1.0 2. Object 2: Report the AbsenceValue = 0.5 • When an Attendance Code that is generating an object with an AbsenceValue = 1.0 or 0.5 is changed, a CHANGE event must be provided for both objects.

Event Type	Requirement
Delete	 When an Attendance Code is deleted. When an Attendance Code that has (Excuse NOT = X) is deleted. When an Attendance Code that has (Excuse NOT = X) is changed to HAVE (Excuse = X). When an Attendance Code that has (Excuse = X) is deleted. When an Attendance Code that has (Excuse = X) is changed to HAVE (Excuse NOT = X). When an Attendance Code that has Status = A and Excuse NOT = X is deleted or changed to no longer have (Status = A, Excuse NOT = X), delete both objects associated with this Attendance Code. When an Attendance Code that DOES NOT have (Status = A and Excuse NOT = X) is deleted, send a delete for this object. When an Attendance Code that DOES NOT have (Status = A and Excuse NOT = X) is changed to HAVE (Status = A and Excuse NOT = X). The Attendance Code reporting 0.0 will be deleted and 2 new AttendanceCodeReflds will be created with 0.5 and 1.0 AbsenceValue.

Object Population and Business Rules

Requirement

The SIF Agent and Zone must have access rights assigned to AttendanceCodeInfo.

The district must belong to the same calendar and year assigned to the SIF Zone in order to populate.

Does not have "Exclude From SIF Reporting" = Checked on the Calendar.

A Natural Refld is not created for this object, it is created by a compilation of IDs. Users can use other IDs within the object to run batch.

Note: This object only has SchoolInfoRefld as other ID.

Object Data Elements

Data Element Label	Description	Business Rules	Data Source GUI Path	Database Field
@Refld	The Id (GUID) that uniquely identifies this AttendanceCodeInfo entity.			
@SchoolInfoRefld	The Id (GUID) that identifies the school where the attendance code is used.	The Refld for the school		School.schoolID

Data Element Label	Description	Business Rules	Data Source GUI Path	Database Field
