The HM01 Homeless Report is an unduplicated list of all the students designated as Homeless at any time within the school year. The report contains homeless and migrant information collected from the Homeless and Migrant tools for students from schools and districts in Nevada.

HM01 Report Editor

Report Logic

- Reports Homeless students where a value exists for the Primary Nighttime Residence field or

Unaccompanied Youth as entered on the Homeless Record.

- Reports the student's most recent migrant record.
- This report only pulls students with a primary enrollment at selected calendars (Type P).
- Includes the most recent Homeless Record where criteria is met and the most recent Homeless Record dates fall within the extract editor date range for that school year.
- For students marked as Pre-K, only report if they are within the ages of 3-5 based on the end date selected on the extract editor.
- The report will return one record per student and will sort by school number, LocalStudentID.

Option	Description
Date Range	Entered dates are used to return students enrolled during that time frame. Enter dates by typing in mmddyy format or by using the calendar icon to choose a date.
Format	Determines the format for the report. Use the State Format (CSV) when submitting the final data. Use HTML for data review and testing.
District-Wide	When this checkbox is marked, the report includes all calendars within the district.
Ad Hoc Filter	Selection includes only those students included in the filter.
Calendars	Selected calendar indicates which students will be included in the report. Multiple calendars can be selected at one time; it is recommended that all calendars in a district not be selected as this will increase the amount of time it takes to generate the extract. The calendar chosen in the Campus toolbar is already selected.
Generate Report	Displays the selected calendar information and extract immediately for review and printing in one of the selected formats.
Submit to Batch	Delays the extract generation to a designated time. Batch Queue functionality provides the ability to schedule when the extract is generated and allows you to navigate away from the extract editor while the extract is being built. The Batch Queue List also lets you view and access historical reports which were run through the Batch Queue tool. See the Batch Queue article for more information.
