2. Select the school **Year** for which the verification should be performed.

3. Verify the **Application Approved Date**.

This read-only field is populated according to the school year selected in Step 3. Applications approved on or before this date are included in the verification pool.

4. Select a **Verification Type**.

The standard selection for most districts is the **Standard Sample Size (Error Prone)**.

The **Alternate Sample Size One (Random)** and **Alternate Sample Size Two (Error Prone Plus Categorical)** options are alternative methods of verification that require special state permission. (Please see the [Verification Types and Logic](#) article for more information.)

5. Mark the **Exclude Direct Certified Applications** checkbox to review which applications should be removed from the Verification process.

When you select this checkbox and click Review Applications, the report will provide a list of applications that should be considered for exclusion.

When you select this checkbox and select Generate Verification, the process will exclude the applications in the database.

6. Mark the **Exclude CEP Schools** checkbox to exclude applications from students enrolled at a CEP school from the verification pool.

Only applications where all student enrollments are at a CEP school are excluded.

7. Mark the **Include Application Detail in Reports** checkbox if you want the application details to be included on the confirmation and validation reports.
8. Click **Review Applications** to review all qualified applications in detail before generating the Verification sample.
