Tool Search: WISEid Import

The WISEid Import updates or adds state IDs generated by WISEid for students and staff.

As required by the Department of Public Instruction, staff IDs must be imported at the beginning of the year, **even if the staff person already exists in WISE** .

The imported data displays personal identifying information including legal names for both students and staff.

WISEid Import

Import Logic

The import identifies individuals (students and staff, depending on the import file) who have a new state ID generated by the WISEid system. The import matches the required fields based on the header name of the column data, not the position of the column.

The import matches data in the file to the local database to determine a single identity match. If a person identifier is included in the file, the WISE ID is imported to the Student/Staff State ID field and the Ed-FI ID field.

Unique ID Match

1. A match is first attempted using the **Local Person ID**. If a match is found, additional validations are done before the value is imported (as follows).
2. If no match is found for Local Person ID, the **Local Student** or **Staff Number** is used. If this

- value is found, the ID is imported into the Person.studentNumber or Person.staffNumber field.
3. If no match is found for Local Student Number or Local Staff Number, the **Last Name, First Name, Birthdate** (not required for staff) and **Gender** fields are used.
 - A match on Last Name and First name excludes all special characters (hyphens, apostrophes, etc.).
 - A match on Birthdate may match with or without leading zeros.
 4. If no match is found for Last Name, First Name, Birthdate or Gender fields, the **Middle Name** and/or **Suffix** fields are used.
 5. If no match is found for Middle Name or Suffix fields, the **information is not imported**.

Import Editor

Field	Description
Import Population	Selection determines what population is being imported - students or staff.
File Contains Local Person ID	Selection determines on what item the import contains - Local Number or None.
File Contains Legal Identities	Selection determines if legal name and gender fields will be used for matching.
Work to Perform	Selection indicates what action will occur - data is validated and tested , or data is imported (without being validated).
File	Use these options to locate and upload the file.

Import Files

1. Determine the **Import Population**.
2. Select the option for what the **File Contains**.
3. Determine the **Work to Perform** by choosing either **Validate and Test** or **Import**.
4. Click the **Browse** button to locate the file.
5. Click the **Upload** button to import the information.

Upon clicking the Upload button, an **Import Summary** displays in a new browser window. This summary lists what task was performed and how many IDs were imported (if any). It also provides a count of any errors and warnings, and what those issue were.
