Non-Employee Resource Filter Fields for Ad hoc Reporting

Last Modified on 03/11/2024 8:44 am CDT

Resource Management Filter Fields | Resource Management > Resource Master

The Ad hoc Reporting tools allow users to create custom queries and reports on various types of information stored within the Campus database. Reports may be used for data analysis and state reporting and queries may be exported out of Campus or used to create filters for standard reports. Custom filters and reports are built by adding elements from Ad hoc Reporting tools like the Filter Designer. The following is a list of available fields that can be included in Ad hoc reports that draw from Human Resources data.
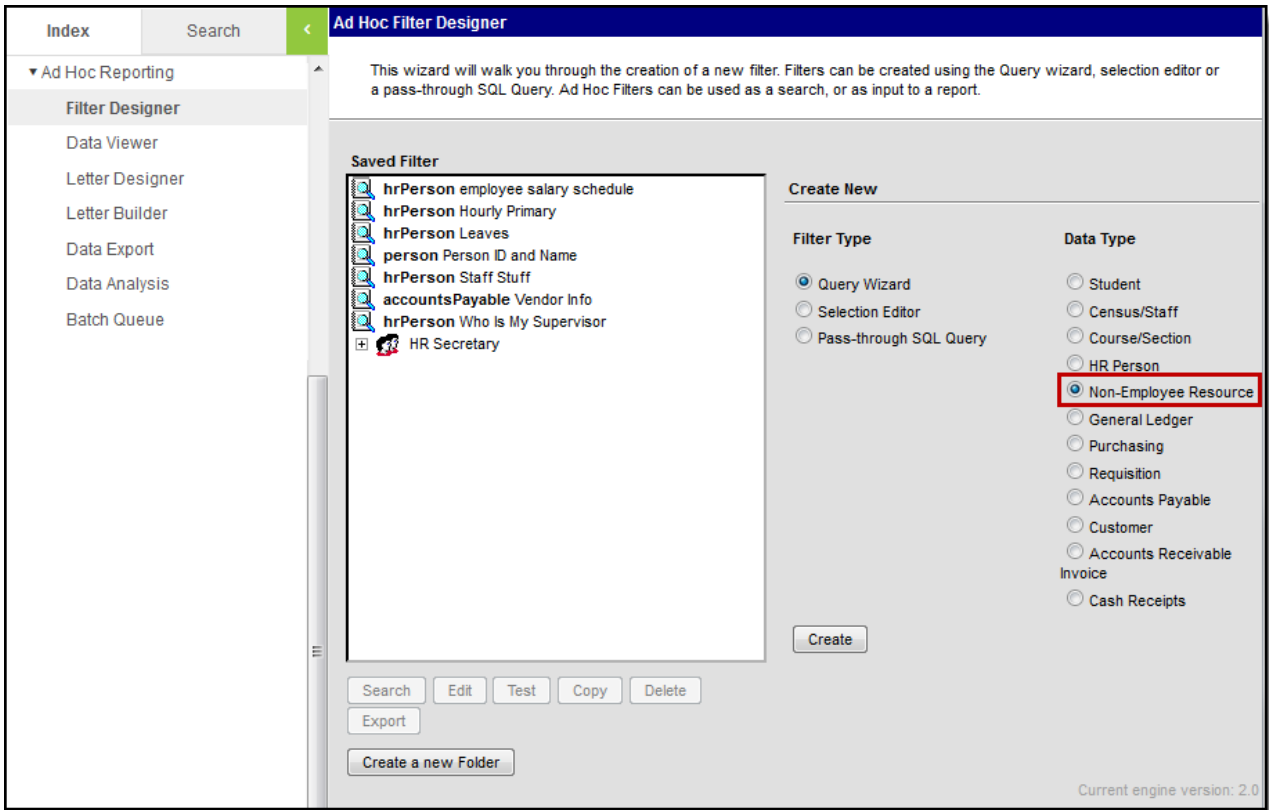

The name of an Ad hoc element is not necessarily the name listed in the user interface; therefore, the following tables briefly define and map Ad hoc elements to the appropriate interface locations/fields.

This article details the fields available for building Non-Employee Resource filters. For other available fields, see the HR Person, Student Filter, Census/Staff, and Course/Section articles.

Resource Management Filter Fields

The following fields are available for creating queries with the Filter Data Type of Non-Employee Resource.

See the Query Wizard article for instructions on managing this filter.

Resource Management > Resource Master
