

# Data Export

Last Modified on 08/29/2025 7:29 am CDT

[Field Logic](#) | [Calendar Selection](#) | [Export an Ad hoc Filter](#) | [Data Export Fields](#) | [Search Ad hoc Filters](#) | [Edit Ad hoc Filters](#) | [Delete Ad hoc Filters](#)

Tool Search: Data Export

The Data Export tool allows users to view the results of Ad hoc filters in multiple report formats and files. All Ad hoc filters created via the [Filter Designer](#) are able to be exported via the Data Export tool.

When using Custom Tab fields within Ad Hoc Query Wizard, all students will appear in the results even if the student does not have a record within the custom dated tab. When exporting fields from a Custom Tab that is Table or List Element Tab Type, Ad Hoc logic will output every possible combination based on a specific date and time. The Table Tab Type stores specific times. The List Element Tab Type always stores 12:00 AM.

Data Export ☆

Reporting > Ad Hoc Reporting > Data Export

Data Export Wizard

This wizard will dump the result of a filter into a data file (csv, tab delimited, xml) or a simple list report.

# Field Logic

The following logic is used when reporting NULL or field values of 0 within Ad hoc filters:

- Float fields = NULL will output as blank unless a default value exists within the Attribute/Dictionary.
- Float fields = 0 will output as a value of 0.
- Number fields = NULL will output as blank unless a default value exists within the Attribute/Dictionary.
- Number fields = 0 will output as 0.

## BIE SPECIFIC LOGIC:

- If an EnrollmentBIE field has a default value, a NULL field will report the default value when filtering data or exported via the Data Export tool.
  - This logic applies to all fields within the EnrollmentBIE table with the exception of foreign keys and End Year.

## CUSTOM DATED FIELD LOGIC:

- Dated Custom fields use the date for outputting records.
  - All possible combinations of records for a distinct date and time report.
  - Values tied to records on other dates will not show in the output for another date/time.

# Calendar Selection

Specific calendars can be selected for the following saved filters:

- Query Wizard filters using a Student Data Type or a Course/Section Data Type
- Pass-Through SQL Queries using a Student Data Type or a Course/Section Data Type

Select a **saved Student Data Type** and **saved Course/Section** filters and select from which calendars to report data. Select calendars by the active year, by the school name or by year. If a calendar is selected in the Campus Toolbar, that calendar is already selected.

Calendars cannot be selected if the query is for Census/Staff Data Types.

Only calendars to which the user is assigned calendar rights are available for selection.

Data Export Calendar Selection

## Export an Ad hoc Filter

1. Select an Ad hoc filter from the **Saved Filters** window. This field is populated with filters created in the [Filter Designer](#) tool. A description of the filter may appear if established within the filter itself.
2. Select the desired format of the exported Ad hoc filter by clicking the appropriate radio button in the **Pick an Export Format** area. See the Data Export Fields table below for more

information.

The length of each field within an Ad hoc filter must be defined in order to properly generate the Fixed Width format. Field lengths are established within the [Filter Designer](#) tool.

3. Select the **Export** button. The exported Ad hoc filter will display in a separate window in the designated format.

## Data Export Fields

All fields within an Ad hoc filter that have a Column Header established will report that value in the header of exported Ad hoc reports. Column headers are defined in the Ad hoc [Query Wizard](#) tool.

Field	Description
<b>HTML list report</b>	Exports the results of the Ad hoc filter in HTML format (See image 2).
<b>XML</b>	Exports the results of the Ad hoc filter in XML format (See image 3).
<b>Delimited values (CSV)</b>	<p>Exports the results of the Ad hoc filter in a number of Delimited values (CSV).</p> <p>Options include:</p> <p><b>Comma</b> - Exports the Ad hoc filter in Comma delimited format (See image 4).</p> <p><b>Tab</b> - Exports the Ad hoc filter in Tab delimited format (see images 5-6).</p> <p><b>Pipe</b> - Exports the Ad hoc filter in Pipe delimited format (see image 7).</p> <p><b>Caret</b> - Exports the Ad hoc filter in Caret delimited format (see images 8-9).</p> <p>The <b>Include column display header</b> checkbox allows users to control whether or not a header is displayed on the exported Ad hoc filter (see image 8).</p> <p>The <b>Double quote data</b> dropdown list allow users to determine when double quotations are added to exported Ad hoc filter data (see image 6).</p> <p>The <b>Include Subtotals</b> checkbox allows users to properly display aggregate totals that may be included in the filter.</p>
<b>Fixed width</b>	Exports the results of the Ad hoc filter in Fixed Width format (see image 10).

Field	Description
<b>PDF report</b>	<p>Exports the results of the Ad hoc filter in PDF format. Selecting the <b>Field Name Only</b> radio button means field names in the header will only display the field name as it exists in the database (<i>i.e.</i>, grade is reported for the student.grade database field (see image 11)). Selecting the <b>Table Name and Field Name</b> radio button means both the table and field name will display in the header on the report (<i>i.e.</i>, student.grade is reported in the header for the student.grade database field (see image 12)).</p> <p>Because Ad hoc filter fields can be grouped and report aggregate data, two variations of the PDF format exist. For example, as seen in image 13, filter fields are grouped by student.stateID and student.lastName with an aggregate count of student.stateID using the Record Count Aggregate Type. Ungrouped Ad hoc filters display in a standard list format (see image 14). For more information about grouping Ad hoc filter fields, see the Ad hoc <a href="#">Query Wizard</a> page.</p>
<b>Cube Analysis</b>	Exports results of the filter into a pivot table. For more information about navigating and utilizing the features of a pivot table, see the <a href="#">Pivot Designer</a> article.

## Exported Data Examples

The following are examples of Ad hoc filters exported in various formats:

SME Behavior Test Total Records: 9					
All Records					
student.lastName	student.firstName	student.grade	behaviorDetail.incidentDate	behaviorDetail.title	behaviorDetail.eventName
Student	Anna	10	02/09/2018	Suspension	Property Damage
Student	Brian	10	01/30/2018	Test	Arson
Student	Brian	10	02/01/2018	assault test	Assault, Physical
Student	Chris	11	02/01/2018	assault test	Assault, Physical
Student	David	09	03/05/2018	Fighting #1	Fighting
Student	Evelyn	09	02/09/2018	Suspension	Property Damage
Student	Evelyn	09	05/09/2018	Behavior Messenger	Disruption
Student	Evelyn	09	05/09/2018	Behavior Messenger - Fighting	Fighting
Student	Frances	12	03/23/2018	Attendance Sub Reports	Disruption

PDF Report - No Grouped Fields within the Ad hoc Filter

## Search Ad hoc Filters

Users have the ability to identify which students are included within an Ad hoc filter prior to exporting data.

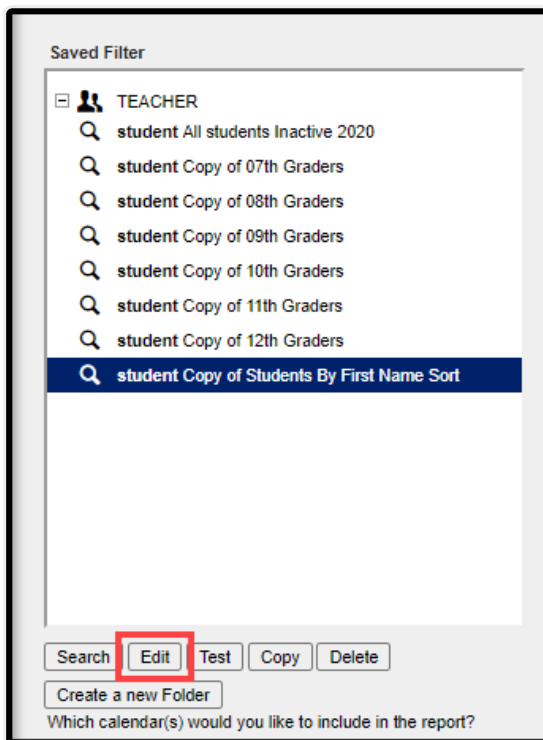

*Searching Ad hoc Filters within the Data Export Wizard*

To generate a list of all students included within an Ad hoc filter, select the filter from the Saved Filters window and click the **Search** button. Student results will appear in the Search tab on the right.

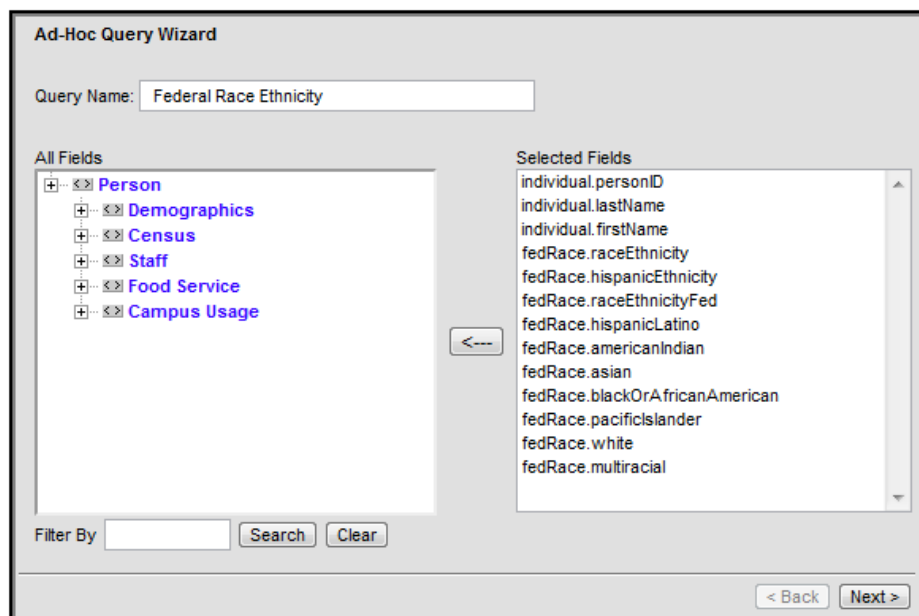

## Edit Ad hoc Filters

Users can edit Ad hoc filters prior to exporting data.

*Editing an Ad hoc Filter*

To edit an Ad hoc filter prior to using the Data Export tool, select the filter from the Saved Filters window and click the **Edit** button. Users will be directed to the [Filter Designer](#) tool with all existing fields/values selected.

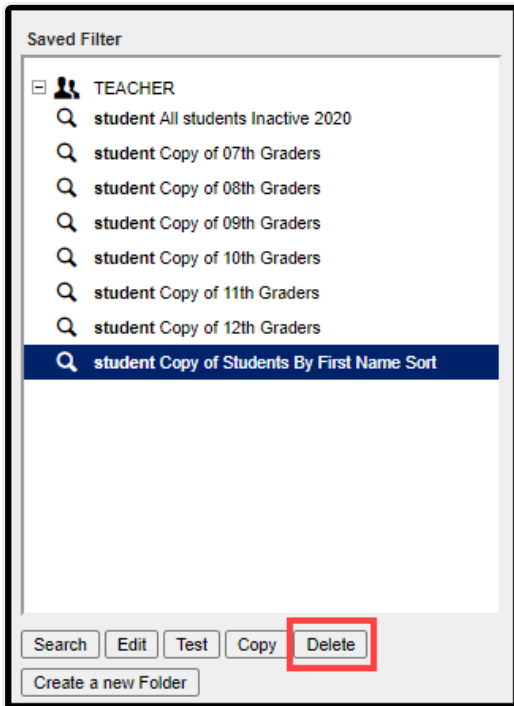

*Editing and Ad hoc Filter - Filter Designer*

From here, users can edit filter values as desired. For more information about editing and creating Ad hoc filters within the Filter Designer, refer to the [Filter Designer](#) page.

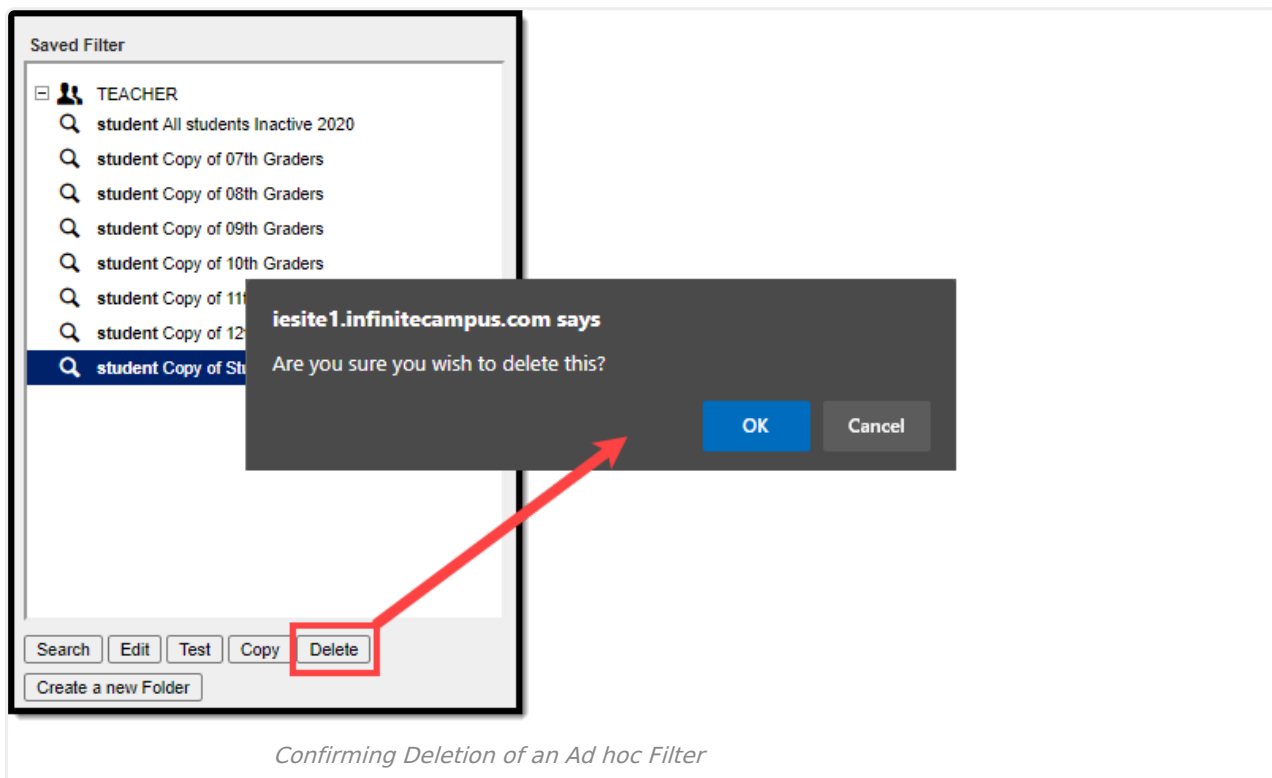

# Delete Ad hoc Filters

Users have the ability to delete Ad hoc Filters within the Data Export tool.

*Deleting an Ad hoc Filter*

To delete an Ad hoc filter, select the filter from the Saved Filters window and click the **Delete** button. Users will be prompted with a confirmation pop-up message.

Select the **OK** button to permanently delete the filter. Select the **Cancel** button to cancel the deletion process and return to the Data Export Wizard editor.

Deleting an Ad hoc Filter within the Data Export tool will permanently delete from all areas of Infinite Campus.
