

# Medicaid Settings

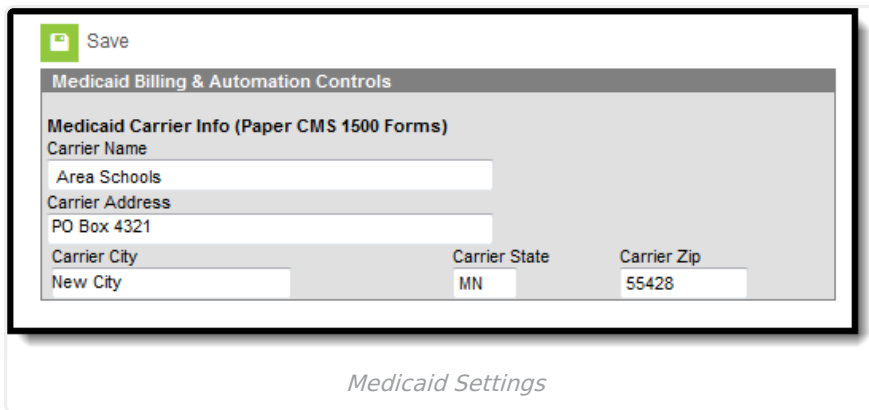

Last Modified on 05/28/2026 3:42 pm CDT

**Classic View:** System Administration > Medicaid > Medicaid Settings

**Search Terms:** Medicaid Settings

Medicaid settings are used for electronic billing functionality (not currently available) and other automation controls. Information entered here is the name of the district for the entity associated with the **NPI number (National Provider ID)** that will be used to bill.

1. Enter the name of the district in the **Carrier Name** as the District Name.
2. Enter the district's address in the **Carrier Address** field.
3. Enter the district's city, state and zip in the **Carrier City**, **Carrier State** and **Carrier Zip** fields respectively.
4. Click the **Save** button when finished. Medicaid settings will be updated to reflect the changes.

The screenshot shows a web form titled "Medicaid Billing & Automation Controls" with a "Save" button in the top left. The form section is titled "Medicaid Carrier Info (Paper CMS 1500 Forms)". It contains the following fields:

- Carrier Name:** A text input field containing "Area Schools".
- Carrier Address:** A text input field containing "PO Box 4321".
- Carrier City:** A text input field containing "New City".
- Carrier State:** A dropdown menu showing "MN".
- Carrier Zip:** A text input field containing "55428".

Below the form, the text "Medicaid Settings" is displayed in a light gray box.

See the [Medicaid Administration Tool Rights](#) article for information on tool rights needed to use this and related tools.
