User Security Tool Rights

Last Modified on 07/29/2026 11:30 am CDT

Tool Rights determine the level of access users have to tools throughout Campus. This article refers to tool rights in abbreviated form (i.e., R, W, A, D or any combination of the four).

Only users with a Student Information System product security role are allowed to modify User Security tools.

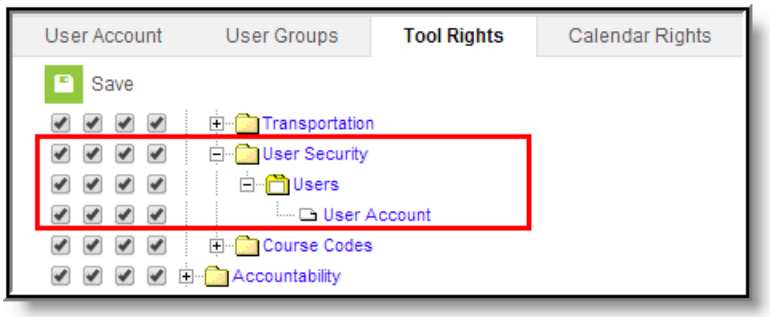

Image 1: User Security Tool Rights

Right	R	W	A	D
Users Security	The user can only view existing User Account values (except password). In order to W(rite), A(dd), or D(elete) values for these tools, users must have a Student Information System (SIS) product security role. The Student Information System - Group Assignment product security role allows assigned users to view and edit other users' User Group information per account. It does not grant them access to additional User Security tools.
