Class Serve Preferences

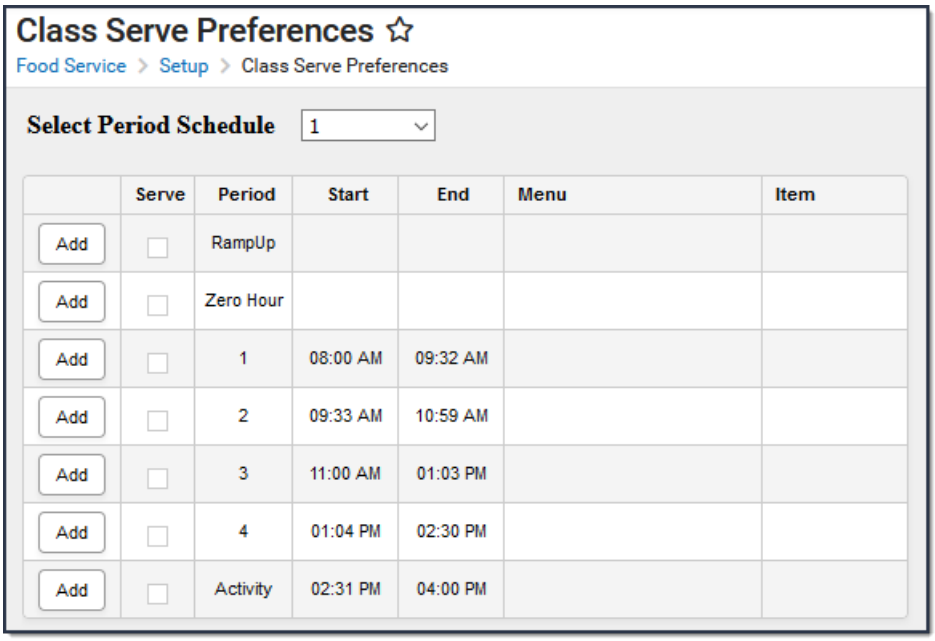

Last Modified on 10/29/2026 10:07 am CDT

Point of Sale (POS) tools are available with Campus Food Service.

Tool Search: Class Serve

In order for teachers to use the Class Serve tool in their classroom, Class Serve Preferences must be established.

To ensure proper recording and reporting for meal claims, Class Serve should only be used in districts where qualifying meals or snacks are being served to eligible students in a classroom by a teacher.

See the Food Service Setup Tool Rights article to learn about rights needed to use this and other Food Service Setup tools.

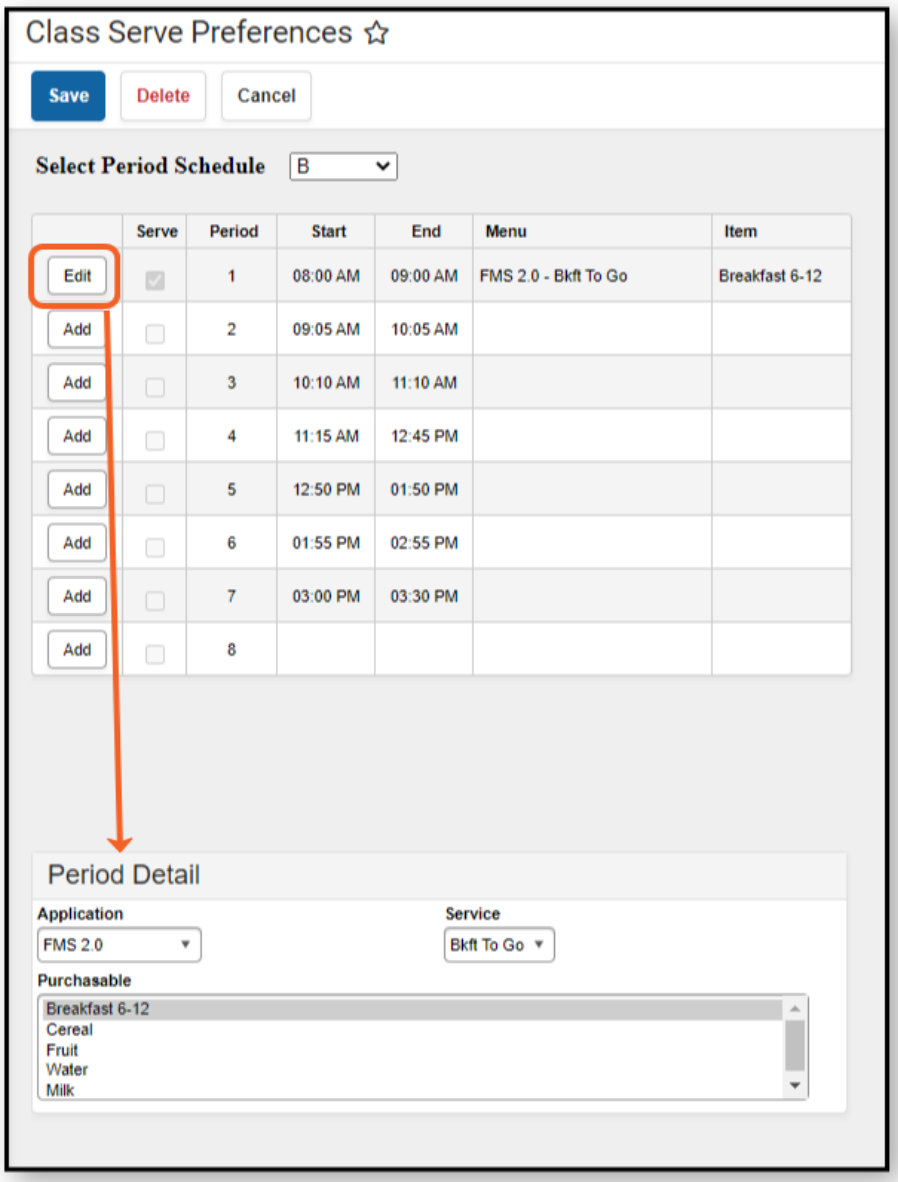

Before setting up Class Serve Preferences:

- Purchasable Items must be created and associated with the proper Federal Programs.

- Applications and Services must be created for Class Serve.
- Periods must be established within Period Schedules.

Establishing Class Serve Preferences

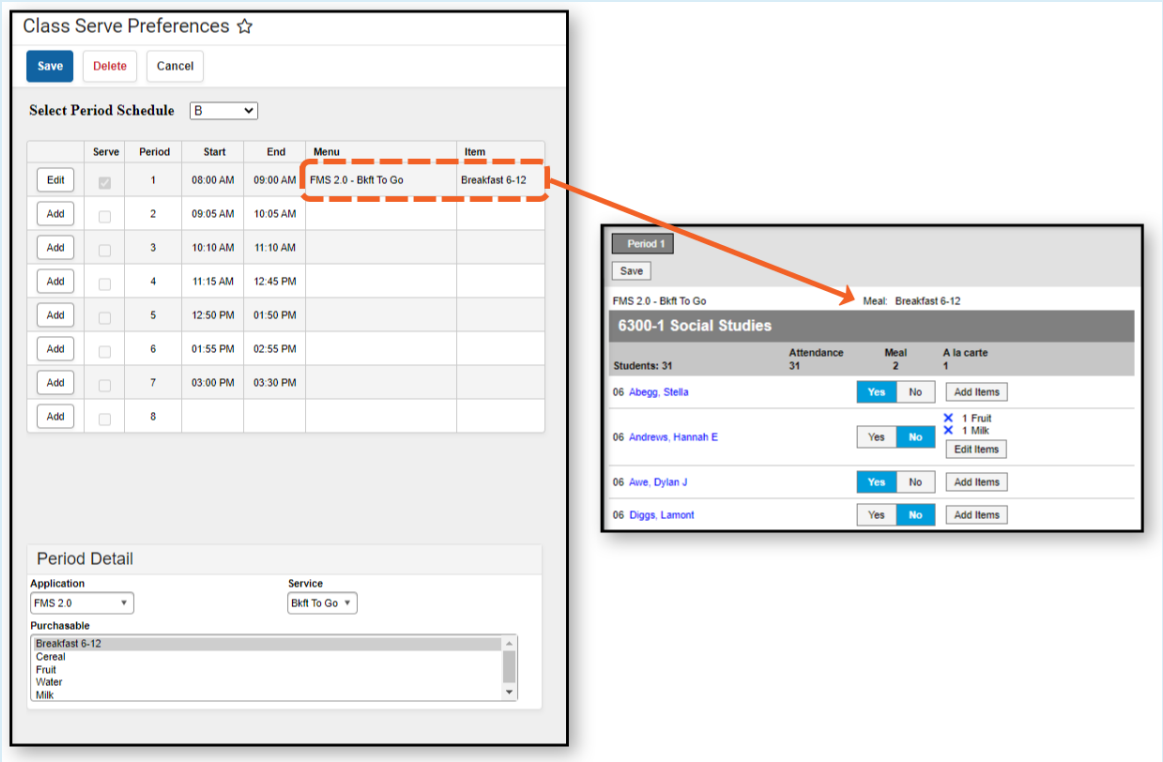

Class Serve Preferences allow users to tie a menu and purchasable items to periods within period schedules.

1. Select the **Period Schedule**. Period schedules are defined in the Periods tool. Available options are displayed based on the Year and School values selected in the Campus toolbar at the top.
2. Click the **Add** button for the Period requiring Class Serve functionality. The Period Detail editor appears.
3. Select the **Application**. Applications are established within the Application Manager tool.
4. Select the **Service**. Services are established within the Application Manager tool.

5. Select the **Purchasable(s)** that will be served as the meal option in Class Serve. Hold the **Ctrl** key to select multiple purchasable items for inclusion.

   If multiple purchasable items are selected in the Period Detail on Class Serve Preferences, students will be charged for each item selected when the teacher indicates the student was served a meal. The purchasable item(s) will list at the top of Class Serve. If students can select other items, teachers can record these by clicking the Add Items button.

6. Click the **Save** button. The **Menu** (Application + Service) and **Item** (Purchasable(s) selected) appear with the corresponding Period.
