

Resync State Data (State)

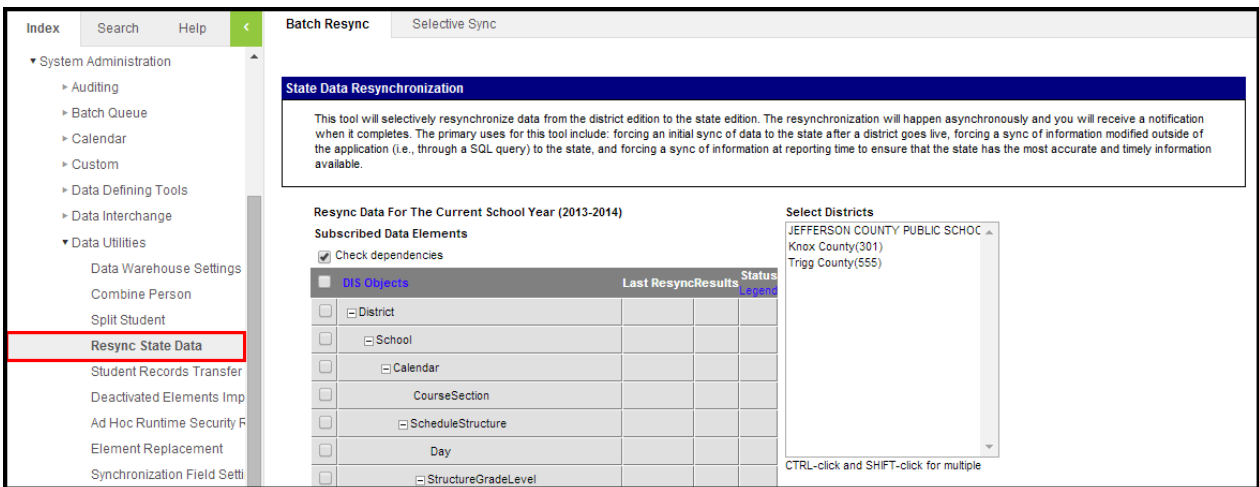

Last Modified on 03/10/2025 2:27 pm CDT

Tool Search: Resync State Data

The Resync State Data tool may be used by district and/or state administrators to manually (re)synchronize batches of district-level data to the state.

District-level users, please see the [Resync State Data \(District\)](#) article. This tool is only applicable in a district/state operating as part of an Infinite Campus State or Regional Edition.

To view State and District ownership over fields within each product area, see the [Synchronization Field Settings](#) tool. This tool indicates which fields are locked at the district level and trigger a sync event when modified at the state level.

Manually Resync Data

To ensure a state/regional database has the most current and accurate information available, it may be necessary for districts to resync - or push - batches of data to the state/regional level. The state can require a resync of district data, as needed.

Performing a manual resync may slow system performance.

Resync Scenarios

A district can resync its data to the state, as needed. However, the following resync scenarios are

mandatory:

- **End of a school year** - A resync must be performed at the end of a school year, after districts have finished entering all data for that year. This resync must be completed before the scoped year of the district/state zones is switched to the new school year. This should be a full resync.
- **Start of a school year** - A resync must be performed at the beginning of a school year, after all enrollments have been rolled forward and the scoped year of the district/state Zones has been updated to match the new school year. This should be a full resync.
- **Database modifications** - A resync must be performed if data is modified directly within the database, instead of within the Campus interface. Modifying data within the database is not recommended. This may be a partial or full resync.
- **State resync request** - The state may request a resync for the purpose of state reporting, gathering attendance snapshots, pulling end-of-year attendance summaries, etc. Districts cannot deny or prevent a resync initiated by the state. This may be a partial or full resync.

Infinite Campus strongly recommends using the state [Verification Summary](#) tool to generate district/state verification reports before resynching a scenario not listed above. Comparing verification report results will indicate whether or not a resync is necessary.

District-Specific View (Shows History Columns)

The resync history/results columns will only appear when a district is selected from the **District** field of the Campus toolbar:

The screenshot shows the 'Batch Resync' tool interface. At the top, the 'District' dropdown is set to 'JEFFERSON COUNTY PUBLIC SCHOOLS (275)'. A red box highlights this dropdown with the text: 'Resync history results display when a specific district is selected in the District field in the Campus toolbar.' Below this, a table titled 'Resync history of JEFFERSON COUNTY PUBLIC SCHOOLS' is displayed. The table has columns for 'Last Resync', 'Results', and 'Status Legend'. The data rows are as follows:

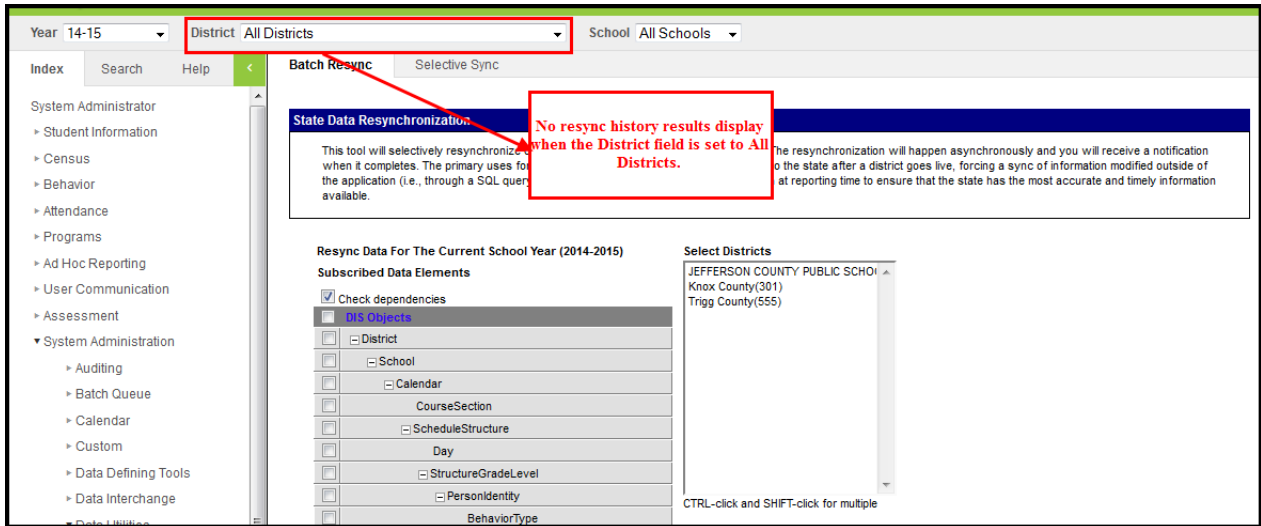

Object	Last Resync	Results	Status Legend
DIS Objects			
[-] District			
[-] School	05/08/2015 10:59:28	Processed: 1 Errors: 0	Green circle
[-] Calendar	05/08/2015 10:59:28	Processed: 181 Errors: 11	Red circle
[-] CourseSection	05/08/2015 10:59:28	Processed: 241 Errors: 11	Red circle
[-] ScheduleStructure	05/08/2015 10:59:28	Processed: 14237 Errors: 1	Yellow circle
[-] Day	05/08/2015 10:59:28	Processed: 413 Errors: 13	Red circle
[-] StructureGradeLevel	05/08/2015 10:59:28	Processed: 413 Errors: 13	Red circle
[-] PersonIdentity	05/08/2015 10:59:28	Processed: 127305 Errors: 93	Yellow circle
[-] BehaviorType			
[-] BehaviorResolutionType			
[-] BehaviorResponseType			
[-] Behavior			
[-] CensusContactSummary			
[-] ContactLog			
[-] Employment			
[-] EmploymentAssignment			

A red box highlights the table with the text: 'Resync history results display when a specific district is selected in the District field in the Campus toolbar.' On the right side, a 'Select Districts' list shows 'JEFFERSON COUNTY PUBLIC SCHO...' selected, with other options like 'Knox County(301)' and 'Trigg County(555)'. A note at the bottom right says 'CTRL-click and SHIFT-click for multiple'.

If no resync has been performed, the resync history/results columns will be blank.

"All District" View (No History Shown)

No history/results columns will appear if "All Districts" is selected in the **District** field of the Campus toolbar:

Use the Resync State Data Tool

The Resync State Data tool is accessible at both the district and state levels. The state can require its districts to resync some or all data. When a resync is initiated by the state, the data is automatically pulled and no action is required of the district.

Resyncs should only be performed by system administrators and/or Campus Support personnel who are familiar with the [Understanding Campus Object Dependencies and Hierarchy](#) section of this page.

Full Resync

A full resync indicates all data objects that report to the state will be resynced. This process will automatically follow the chain of object dependencies that support the Campus hierarchy.

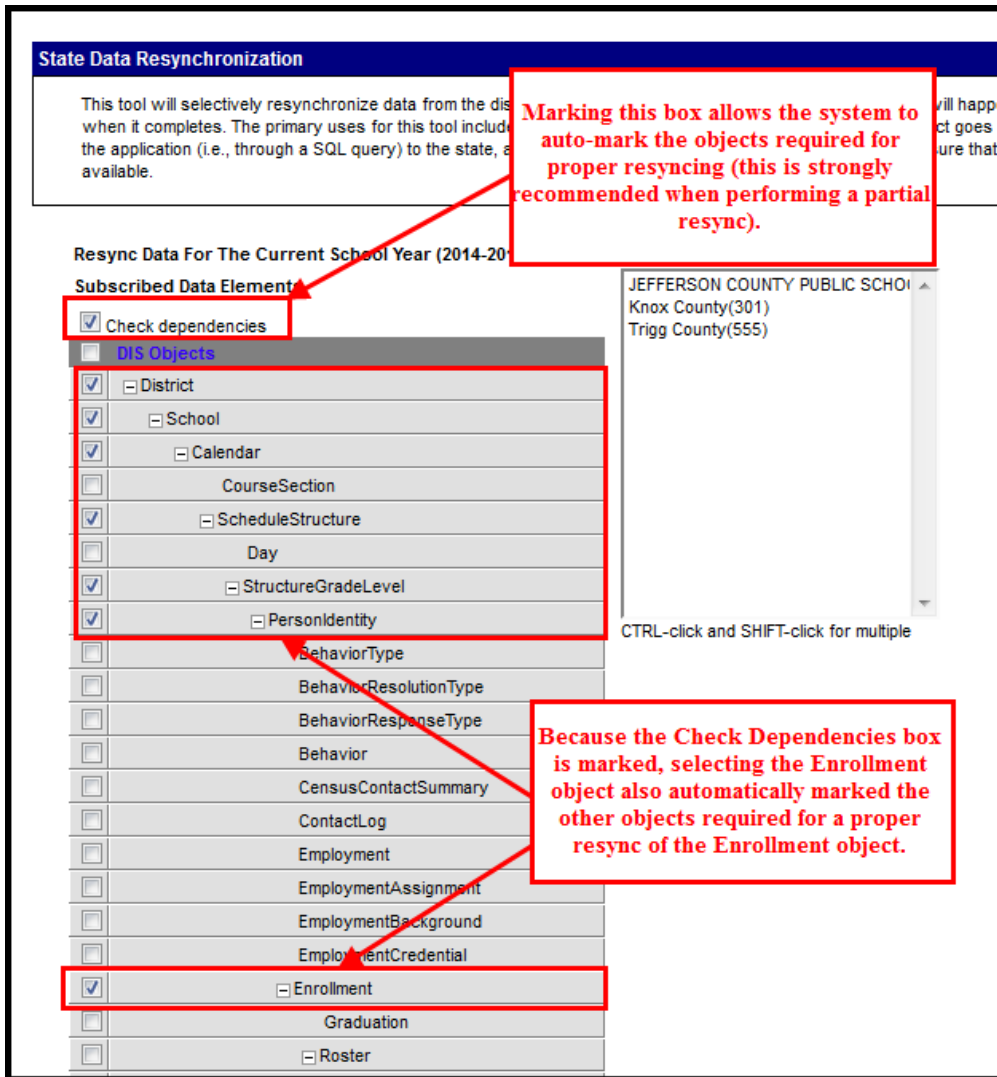

1. Select a district(s) to resync from the **Select Districts** box. If a district is set in the the District field of the Campus toolbar, it will already be selected in this box.
2. Select the **DIS Objects** checkbox in the top left column of the table. All data objects listed on the tool will be selected.
3. Click the **Request Resync** button, located below the table.
4. Click the **OK** button on the verification pop-up window. All data objects will be resynced from the district-level database to the state-level database.

Partial Resync

When a full resync is unnecessary, a partial resync may be performed. A partial resync involves specific data objects selected for resync by a user (instead of resyncing all objects).

The **Check Dependencies** box should be marked when performing a partial resync. This ensures syncing of all necessary parent objects (on which the desired resync object is dependent). Please refer to the [Understanding Campus Object Dependencies and Hierarchy](#) section of this page for more information related to syncing and dependent relationships between parent/child objects.

1. Select a district(s) to resync from the **Select Districts** box.
2. Mark the **Check Dependencies** checkbox.
3. Mark the checkboxes of the data objects to be resynced.
4. Click the **Request Resync** button located below the table.
5. Click the **OK** button on the verification pop-up window. All data objects will be resynced from the district-level database to the state-level database.

Resync Data from the Previous or Next School Year

This option is only available to districts that have been configured to sync data for the previous and/or next school year (in addition to the current year).

If the district has been configured to sync data for the previous and/or next school year (in addition to the current year), the data objects available for resync will be limited. To resync data from the previous or next school year, the **Year** field of the Campus toolbar must be set to the desired year. A limited set of objects will be displayed.

Objects that appear on the Resync State Data tool when the previous/next school year is selected will meet both of the following criteria:

- Objects are related specifically to the school year displayed in the **Year** field of the Campus toolbar.
- Objects have been configured to sync for the school year displayed in the **Year** field of the Campus toolbar.

Objects that do NOT appear on the Resync State Data tool when the previous/next school year is selected will meet one or both of the following criteria:

- Objects that are not tied to a school year will not display when the previous/next year is selected in the **Year** field of the Campus toolbar. To resync these objects, the current school year must be selected in the **Year** field of the Campus toolbar.
- Objects that are not configured to sync for the previous/next school year will not appear.

A resync of the previous/next school year may be performed in the same manner(s) as the current year, as listed in the [Using the Resync State Data Tool \(State Level\)](#) section.

Analyze Resync Attempts and Results

The manual resync process may warrant user analysis of resync attempts and results. The Resync State Data tool displays basic details related to state resync requests:

Batch Resync Selective Sync

State Data Resynchronization

This tool will selectively resynchronize data from the district edition to the state edition. The resynchronization will happen asynchronously and you will receive a notification when it completes. The primary uses for this tool include: forcing an initial sync of data to the state after a district goes live, forcing a sync of information modified outside of the application (i.e., through a SQL query) to the state, and forcing a sync of information at reporting time to ensure that the state has the most accurate and timely information available.

Select Districts

JEFFERSON COUNTY PUBLIC SCHOOLS
Knox County(301)
Trigg County(555)

- **Last Resync column** - Displays the date and time the last resync was started for the object.
- **Results column** - Hovering over a result will indicate the total number of records sent for resync. This column displays two types of results for the object:
 - *Processed* - The total number of attempts to resync records.
 - *Errors* - The total number of records that did not resync to the state.

The *Errors* number includes sync failures as well as attempts to sync records that are not allowed to sync to the state (i.e., state-excluded enrollments, state-excluded grade levels, state-excluded calendars, etc.). Checking the district agent's log on the [Agents](#) tool will allow system administrators to review errors.

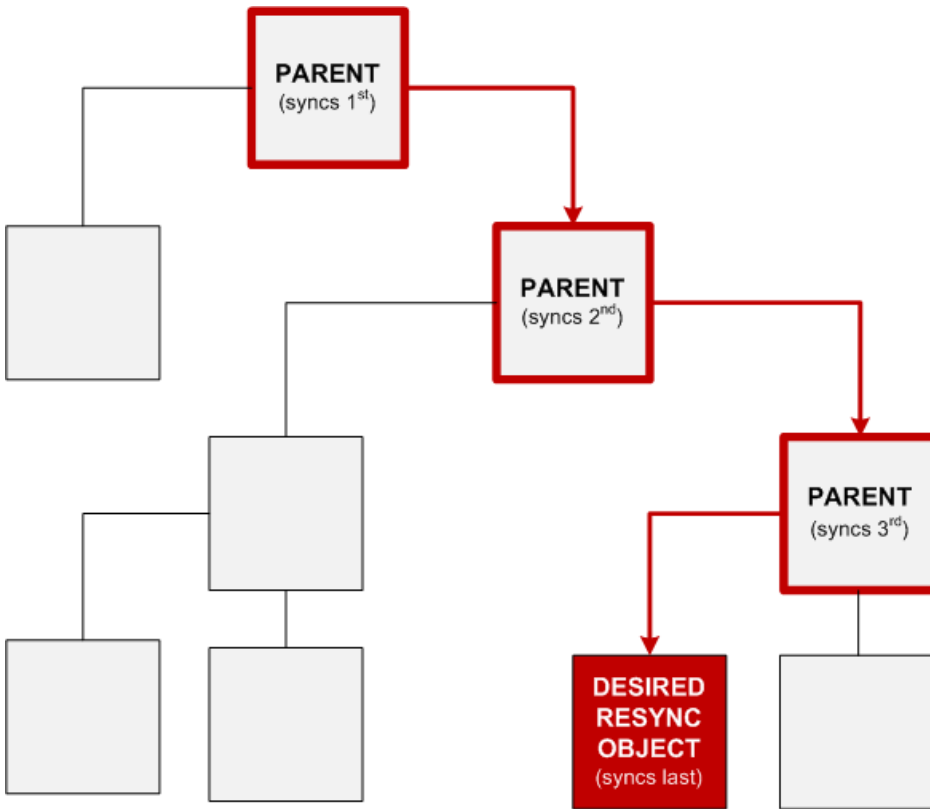

- **Status column** - Displays a colored dot indicating the level of sync success. Clicking on the **Legend** link in the header of this column will show a key that explains the logic used for the colored dots in this column.
 - *Green* - Indicates that the sync finished without any errors.
 - *Yellow* - Indicates that the sync finished with less than or equal to 1% of sync attempts resulting in error.
 - *Red* - Indicates that the sync finished with more than 1% of sync attempts resulting in error.
 - *Gray* - Indicates that the sync is currently in-progress.

The following tools may also be used for additional analysis of resync attempts:

- [Agents Tool - Agent Queue](#)
- [Agents Tool - Agent Log](#)
- [Error Log Tool](#)

Understand Campus Object Dependencies and Hierarchy

Campus data objects exist in a hierarchical structure enforced by database dependencies. Database tables use foreign keys to link related tables/data objects. This creates a dependency chain of parent/child relationships between objects which require the “parent” to be synchronized before the “child.” When all available data objects are resynchronized, the process follows the natural order of object dependencies.

However, when only select data objects should be resynced, the system must follow a specific order to sync all appropriate “parent” object(s) before the desired “child” object(s). Resyncing certain data objects (instead of all objects) will result in error if the necessary parent object(s) have not been properly resynced first. The Resync State Data tool allows the system to properly sync objects in the intended parent/child order.

Campus Object Hierarchies

Campus resync object hierarchies are explained in the following key and table.

- **Resync Object column** -- Lists the data objects available for manual resynching on the Resync State Data tool. This is the object selected for resynching by user.
- **Parent Objects column** -- Lists the "parent" objects on which the Resync Object is dependent. Parent objects are listed in dependency order (top-level parent listed first, immediate parent listed last). The immediate "parent" of the Resync Object is bolded and indicated by an asterisk [*].
- **Child Objects column** -- Lists the "child" objects that are dependent on the Resync Object. Child objects are listed in alphabetical order. The immediate "child" object(s) of the Resync Object are bolded and indicated by an asterisk [*].

All sync objects are listed in the table below; however, not all objects are applicable to all districts/states/regions.

Technical Information

The *DISBatchHistory* database table stores historical information related to resync requests. Though only the most recent request summary information appears in the user interface, historical resync summary data is stored in the table.
