PATH: *WA State Reporting > District Student File (B)*

The District Student File (B) generates a record(s) for each student served in the district during the current school year. Information regarding student enrollment, along with the basic demographic data associated with the student (including those children aged birth through two receiving services through an Individualized Family Service plan) report.

Multiple enrollment records within one district in which the student entered, exited, and re-entered a district can cause multiple records to report. Entry and exit dates may not overlap for individual students.

District Student File (B) Extract Editor

Report Logic

A record reports for every primary enrollment in the selected calendar(s) that was active at least one day on or between the calendar Start Date and the As of Date entered in the extract editor.

- If multiple primary enrollments occur more than one record reports.
 - Campus recommends that if a student exits their Primary enrollment and the secondary enrollment is active at the time of the exit becomes the new Primary enrollment, both enrollments should be End Dated and a new enrollment created and flagged as Primary.
- Student enrollments, Calendars, and Grade Levels marked as State Exclude, as well as students marked as No Show do not report.

Generating the Extract

1. Enter an **As of Date**. This field defaults to the current date. Enter a new date in *mmdyy* format or

- by clicking the calendar icon and selecting a date.
- 2. Select which **Grades** will be included in the report OR
- 3. Choose an **Ad Hoc Filter**.
- 4. Select the **Format** in which the report will generate.
- 5. Select the **Calendars** to include in the report.
- 6. Click **Generate Extract** to generate the report in the indicated format or **Submit to Batch** to schedule when the report will generate.

Users have the option of submitting report request to the batch queue by clicking **Submit to Batch** instead of Generate Extract. This process will allow larger reports to generate in the background, without disrupting the use of Campus. The generated extract is available in the Process Inbox For more information about submitting a report to the batch queue, see the [Batch Queue](#) article.

Only the header row will report if there are no records reported in the extract.
