

Treatment Setup

Last Modified on 04/08/2026 12:12 pm CDT

Tool Search: Treatment Setup

The Treatment Setup tool allows users to enter treatments for students when they visit the Health Office. This list contains the treatment name and a code. This code can be a district-defined listing or based on state-approved treatments.

25	IV/230

HealthTreatmentList Detail

*Code: 8 Active

*Description: In Wheel Chr

Treatment List

See the [Health Administration Tool Rights](#) article for information about rights needed to use this tool.

Workflow of Treatments

After [Conditions](#) and Treatments are entered in System Administration, and Conditions are assigned to students on their Conditions tool, Treatments are assigned to those conditions. For students who receive treatments on a regular basis for ongoing conditions, treatment Health Office Visits can be scheduled. All active treatments for a student are available for selection on a Health Office Visit.

Create Health Treatments

1. Select the **New** button. The **Health Treatment List Detail** editor will appear below.
 2. Enter a code for the treatment within the **Code** field. This code can be a state code for a certain treatment, a district code, or a number that comes from a health dictionary. It can be alphanumeric up to 10 characters.
 3. Mark the **Active** checkbox to make the treatment available to link to conditions.
 4. Enter a description of the treatment in the **Description** field. This description can be up to 50 characters. It cannot contain special characters like quotation marks or question marks.
 5. Select the **Save** button when finished. The new treatment displays in the Health Treatment List table.
