

# OLR Lists Bank

Last Modified on 06/25/2024 5:38 pm CDT

[OLR Lists Bank Editor](#) | [Enter List Bank Translations](#) | [Map Health Conditions](#) | [Exporting and Importing Translations](#)

This documentation applies to both versions of Online Registration.

## Tool Search: OLR Lists Bank

The OLR Lists Bank allows users to display the translation of the dropdown lists that display on the Online Registration portal pages. Unlike the [OLR Literals Bank](#), the OLR Lists Bank only changes the text of the items in the dropdown list, not the names of the fields.

When the Translation column is populated, that entry displays for people who have chosen that language.

To access the this tool, users must also have tool rights to the [Language Groups](#) tool.

## OLR Lists Bank Editor

The following items display on the editor.

Field	Description
<b>Configuration</b> <i>Required</i>	The year associated with this configuration.
<b>Language Group</b> <i>Required</i>	The language for the translation.
<b>OLR List Bank</b> <i>Required</i>	This tree lists every field that can be given translated text in the selected language. English values are automatically entered; districts just need to populate the text for other languages that meet the needs of the users.
<b>Translation</b>	Displays the translated text of the available options.
<b>Description</b>	Displays the original text of the available options.
<b>Code</b>	Lists the assigned code for the options. This should not be modified.
<b>Seq</b>	Determines the order in which the translated text displays. If this value is not populated or is the same for all options, the items display alphabetically by Translation.

## Enter List Bank Translations

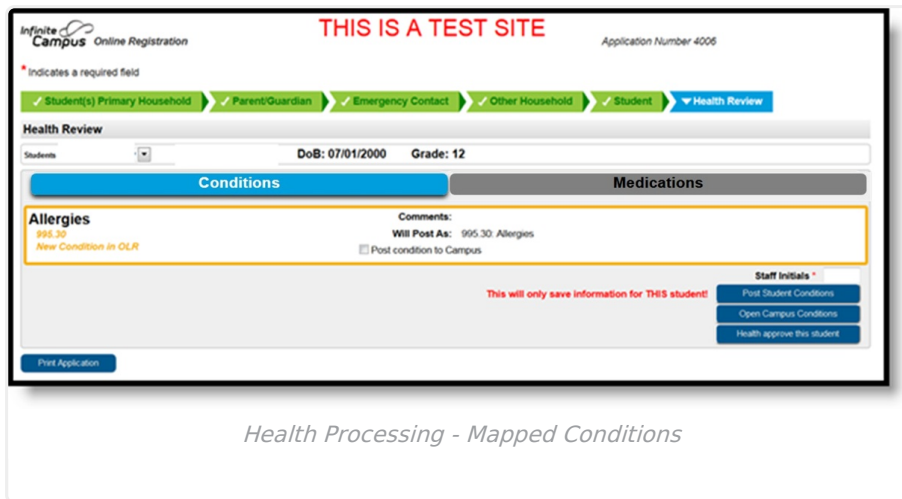

1. Select the field from the **OLR Lists** dropdown for entering translated text. A **Translations** editor displays.
2. Enter the **Translation** that corresponds to the **Description**.
3. If desired, enter the **Sequence**.
4. Repeat as needed, using the **Add Translation Dictionary** button to add more rows.
5. Click the **Save** button when finished. The saved text is visible on the Online Registration portal pages.

## Map Health Conditions

Locate and have available the **Description** and **Code** of the health condition from the [Condition List](#) (System Administration > Health > Condition List).

1. Select the **Person - Health Conditions** from the **Language Group/OLR Lists**.
2. Enter the **Description** and **Code** from the **Condition List** for the conditions that should be mapped on the List Bank Translations tool.
3. Save the entry.

The Health Staff Processing tool displays the mapped conditions.

Health Processing - Mapped Conditions

To map the medical/mental health conditions:

- Mark the **Post condition to Campus** for each condition that should be mapped.
- Staff need to add their initials.
- Open the conditions to review or post student conditions.

Verify the conditions are there by clicking the Medications tab on the Health Processing view. Medications do NOT post automatically.

If districts use the optional **Type** field when entering conditions into the [Condition List](#) (System Administration > Health > Condition List), the Type and Condition must be entered together, with no spaces, in the OLR Lists Bank Code field.

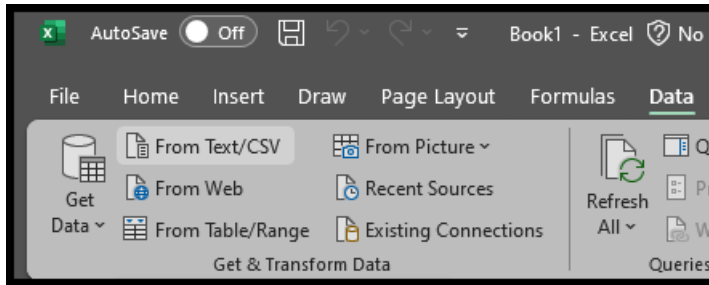

## Exporting and Importing Translations

OLR has many lists to translate, and districts often want to use a third-party vendor to complete their translations. They can now use the Import and Export options to export a file out of Infinite Campus (with or without translations) and import the file with their new translations.

### Exporting a File to be Translated

1. Select the Language Group you wish to export for translation.
2. Click **Export to File**.
3. Select the appropriate export option:
  - **All list items without existing translations** - Use this if you want to have all current English text translated.
  - **All list items with existing translations included** - Use this to generate a backup of the current text or if you want the current translated text available while translating.
  - **New list items only** - This file will only contain list items for which there are currently no translations for the previously selected language. Use this file if you only want to update new list items without affecting any other translated text.

4. If you are opening a file with prior translations or non-English characters, be sure to import the file into Excel or other spreadsheet software as a UTF-8 file.
  1. Open Excel to a blank spreadsheet. Do not open Excel using the file itself.
  2. Go to **Data > From Text/CSV >** Select your file and click **Import >** Change the **File Origin** to 65001: Unicode (UTF-8).

3. Click **Load**.
5. Add your translations in the "TranslatedText" column. Do not translate the column header itself.
6. Save the file in the UTF-8 CSV Format.

If the file is ever saved as a regular CSV, non-English characters may turn into question marks "?" and render the translations useless.

## Importing a File that has been Translated

1. Ensure your file is saved in the UTF-8 CSV Format.

If the file was not saved as a UTF-8 CSV, check to see if any non-English characters in the

translations turned into question marks "?". If they have, fix those translations and re-save the file as a UTF-8 CSV.

2. Click **Import From File**.
  3. Click **Select Files** and select the file you wish to import.
  4. Click **Import**.
