

OneRoster CSV Extract Configuration

Last Modified on 10/21/2024 8:20 am CDT

Historically, Infinite Campus made the OneRoster 1.1 CSV extracts available via the [Data Extract Utility](#) tool as a stop-gap measure for districts whose third-party vendors had not yet implements the OneRoster API. Support for the OneRoster CSV Extracts ended in 2019.

If your district is still using the legacy OneRoster CSV implementation, we encourage you to move to the OneRoster API. See the [Digital Learning Applications Configuration](#) and [Configuring OneRoster Connections](#) articles for more information.

Infinite Campus fully supports the OneRoster specification via an API implementation, which supports secure, real-time connections between Campus and third-pary vendors. Our API implementation is kept up-to-date and is certified by 1EdTech. If your vendor does not currently have a OneRoster API implementation, Infinite Campus encourages their development team to develop one. See the [Digital Learning Partners](#) page for more information.
