Tool Search: Feeder Export

See the following pages for more information:

- [Feeder Import Wizard](#)
- [Feeder Imports](#)
- [Feeder Exports](#)

Feeder Data Export is used to generate a list of students who will be exported to a new district in the next school year. This export can be used by those districts that use Campus at the sending school to gather data for students moving to the receiving school district that is not on Campus. It can also be used by both sending and receiving districts that use Campus.

The screenshot shows the 'Feeder Data Export' window. At the top, a blue header bar contains the title 'Feeder Data Export'. Below the header, a white box contains the text: 'This export will produce the Infinite Campus standard feeder system format for the selected grade levels'. Underneath, a section titled 'Feeder System Format' is visible. It contains two options: 'Select Ad Hoc Filter to export' with a dropdown menu showing 'Feeder', and 'OR Use grade level(s) to export' with a list box showing 'All Students', '09', '10', '11', and '12'. At the bottom center, there is a 'Generate Export' button.

## Export Editor

The Feeder Data Export Editor provides options to generate a list of students based on a previously made [Ad hoc Filter](#) or based on the student's current grade level of enrollment. Also available is a Feeder Standard Format which provides the data elements in the same order as is accepted when using the Feeder Import Wizard.

**Feeder Data Export**

This export will produce the Infinite Campus standard feeder system format for the selected grade levels

**Feeder System Format**

Select Ad Hoc Filter to export: Feeder

OR

Use grade level(s) to export: All Students, 09, 10, 11, 12

Generate Export

Selecting this option will display a list of fields contained within the data export. This is available for mapping purposes.

## Using the Feeder Data Export

1. Select the appropriate **Ad hoc Filter to Export** from the dropdown list.
2. Or, select a specific grade level or all grade levels.
3. Click the **Generate Export** button. A CSV file will appear, listing the selected students.

	A	B	C	D	E	F	G	H	I	J	K	L
1	Feeder Di	Feeder Sc	Export Date	State ID	Student N	Last Name	First Nam	Middle N	Suffix	nickname	birthdate	birthVerif
2	100	190	1/21/2011		111111	Student	Jason				1/24/1993	
3	100	190	1/21/2011		111111	Student	Francesca				1/24/1993	
4	100	190	1/21/2011		111111	Student	Angela				1/24/1993	
5	100	190	1/21/2011		111111	Student	Alexander				1/24/1993
