

Detention Scanner

Last Modified on 04/28/2026 1:39 pm CDT

The Scanning toolset is part of the [Campus Workflow Suite](#).

In order for scanners to work correctly, the cursor must be in the entry box prior to scanning a barcode. If the cursor is not in the box, the scanner will not be able to copy/paste the number into the box and the student will not be scanned in correctly.

Tool Search: Detention Scanner

The Detention Scanner tool is used to check students into a detention room. Students can scan ID cards and/or the teacher can manually enter Student ID numbers to take attendance.

The screenshot shows a web interface titled "Detention". It features a text input field labeled "Student Number" with a red asterisk indicating a required field. Below the input field is a blue button labeled "Enter". The entire interface is enclosed in a light gray border with a drop shadow.

Once a student enters or scans in a student ID, the **Student Information** screen displays.

Student Information

Name: Student, Caleb
Grade: 10
PersonID: 18725
Detention Time (minutes): 591

Student Information

The teacher then verifies the student is supposed to be in detention and then clicks **Confirm** or **Cancel**.

When the student re-enters their student ID, the student is checked out of detention and a detention record is created. See the [Detention Tracker](#) documentation for additional information
