The Scanning toolset is part of the [Campus Workflow Suite](#).

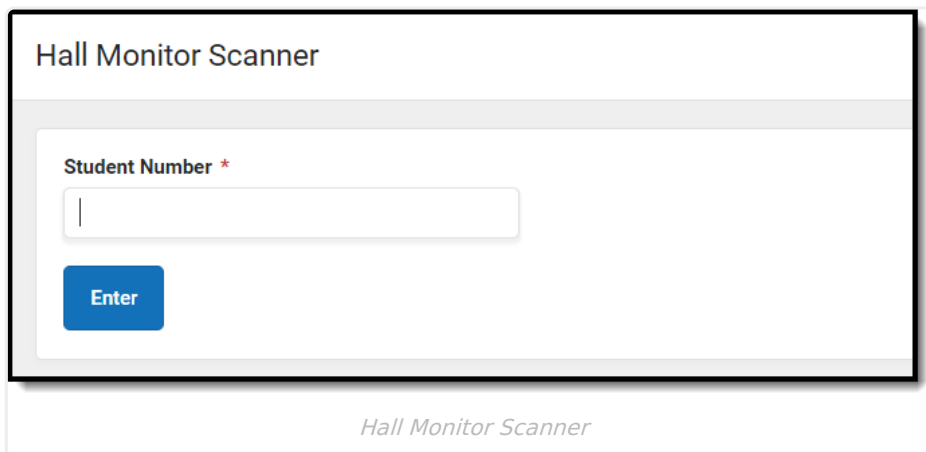

## Tool Search: Hall Monitor Scanner

The Hall Monitor Scanner tool is used to track tardy students during the school day. The student scans in an ID card and then the Hall Monitor can input a reason the student is late to class. This information is automatically sent to a printer and a hall pass is printed for the student.

In order for scanners to work correctly, the cursor must be in the entry box prior to scanning a barcode. If the cursor is not in the box, the scanner will not be able to copy/paste the number into the box and the student will not be scanned in correctly.

Printers must be configured to automatically print hall passes. See the [Printer Setup](#) documentation for additional information.

First, students either scan ID cards or the attendance taker enters the ID number manually from the **Hall Monitor Scanner** screen. Click the Enter key on the keyboard or the **Enter** button when manually entering ID numbers to continue.

The screenshot shows a web interface titled "Hall Monitor Scanner". Below the title is a light gray header bar. Underneath is a white form area containing a label "Student Number \*" followed by a text input field with a vertical cursor. Below the input field is a blue button with the text "Enter". The entire form is enclosed in a thin black border. Below the screenshot, the text "Hall Monitor Scanner" is written in a light gray, italicized font.

The **Scanned in Student** screen displays when a student ID is entered. An image of the student displays, as well as identification information and any current term attendance data for the student. The attendance personnel then selects a Tardy Excuse from the dropdown, enters any comments related to the tardy, and then clicks **Confirm** to print a hall pass for the student.
