

Campus Cloud Hosting

Last Modified on 03/23/2026 3:46 pm CDT

Campus Cloud hosting provides the most economical hosting solution for small and medium-sized districts that want the safety and security of cloud-based support while working within a tight budget.

The following are some of the benefits of using Campus Cloud Hosting:

- No student minimum or maximum
- Very affordable
- Centralized application management
- Individual district database
- Automatically updated each week
- Always updated to the latest version of Campus
- Nightly remote backups to the Infinite Campus data center

Available Premium Products

Supported Sites

Campus Cloud hosting provides districts with the following sites:

Customer Production

The production site (also known as the "live" site) is the web application and database where users do their day-to-day work. This includes all reports generated by Infinite Campus. Updated weekly, this site handles all incoming activity from the production URL, interfaces with the district's production database and provides all outgoing data to that URL. This site links to the Campus Community for easy access to product information and learning material, and provides individualized logins for each district user including teachers, staff and students.

Each login is access-restricted, meaning each Campus user will only see the features of Campus they have been assigned to by their district's administrator. Districts have the option of authenticating user accounts using LDAP or SSO/SAML and the Data Extract Utility is included at no extra charge. Campus Managed Services is available to assist with implementing any additional Premium Products a district may choose.

Customer Sandbox

This data is a replica of production and personal identifying information is not sanitized.

The sandbox is used to test and implement new features in Campus (such as enabling LDAP or SSO authentication types) in a production-like site. When the production site is updated to a newer version, the sandbox site is updated to the same version. Infinite Campus will refresh this site with data from the customer's production site at the request of the customer.

Some data in the sandbox site is scrambled or removed and features may be disabled in order to prevent conflicts with the production site. For example, the messenger and task scheduler features are disabled, while some premium products such as Point of Sale/Food Service are available to test in the sandbox site.

FAQ

The following is a list of Frequently Asked Questions about Campus Cloud hosting.

How are extracts pulled for use with third-party software?

The [Data Extract Utility](#) in the Campus Cloud user interface allows the district to produce these extracts. Connect to your database instance using standard SQL Server database tools to perform any additional data extracts you require.

Will the district still be able to have SQL Server connections to their database?

Yes, you will still have access to this feature. This access is provided on a request-only basis, and requires both district staff and superintendent approval before it can be provisioned.

Will the district still have RDP access to the system?

No.

Will the district still be able to utilize SSRS?

Yes. SSRS is available via a secure connection from any web browser. Https:// protocol is required.

Is Data Warehouse/Tableau still an option with this hosting model?

No
