Tool Search: SSID Request Import

The SSID Request Import allows districts to import student identifier information from the State.

Importing Logic

- Updates the Student State ID for each student in the file.
- Matches on Last Name, First Name, Local Student Number (LEA Student Number)
- When **Match on Protected Identity** is checked on the extract editor, logic compares the Protected Identity Information > Last Name and First Name when one exists for a student, in addition to the student's Local Student Number.
- The imported file must be in CSV format.
- When a student cannot be matched from the import file, a line number and validation/error message is provided.
- When more than one student is matched in Infinite Campus from the Import file, a line number and validation/error message is provided and the tool does not update the student information.

Importing the File

1. Mark the **Match on Protected Identity** checkbox to have logic compare the Protected Identity Information > Last Name and First Name when one exists for a student, in addition to the student's Local Student Number. This checkbox is optional.
2. Click **Choose File** and select the file from your local hard drive or network.
3. Once the file is selected, the file name should appear on the import editor. Click **Upload**. A report will appear indicating any errors or issues encountered.

Report Data Elements

This is the upload format that will be imported in CSV format:

Seq	Data Element Label	Business Rules	Data Source GUI Path	Format
1	File Line Number	File Line Number	Returns the value from the Request file.	8, Numeric
