OneRoster - Overview

Last Modified on 09/07/2023 3:55 pm CDT

> This article is intended for use by members of the Digital Learning Partner Program and is not designed for general Campus users.

OneRoster is a set of specifications established by the IMS Global Learning Consortium. Campus created our OneRoster API based on these specifications.

The OneRoster API allows third-party vendors to share data with Campus by requesting section and student information and passing back assignments and scores. Two types of OneRoster connections are available:

- Rostering Services - Allows third-party vendors to receive section and roster data from Campus.
- Grade Book Services - Allows third-party vendors to receive section and roster data from Campus and push assignments and scores to Campus.

Digital Learning partners must be certified in the IMS Global Specification to connect to the OneRoster API. Upon entering the Partner Program, vendors receive a welcome packet with instructions for connecting to the API.

In support of vendor partners, Campus provides the following services:

- Support Ticketing System
- A welcome document including vendor-specific connection information.
- A pre-release site of the most recent version of Campus for testing specific implementations.
- Additional information, linked below.
