

Daily Health Log Scanning

Last Modified on 05/04/2026 1:27 pm CDT

The Scanning toolset is part of the [Campus Workflow Suite](#).

Tool Search: Daily Health Log Scanning

The Daily Health Log Scanning tool is used to scan in students for daily health tracking purposes in conjunction with the Daily Health Log tool.

Scan in a student

Manually enter a student number or scan the ID, then click **Enter**.

The screenshot shows a web interface titled "Daily Health Log". Below the title is a light gray header bar. Underneath is a white input area with the text "Please scan your student ID *". Below this text is a long, empty text input field. At the bottom left of the input area is a blue button with the text "Enter".

Once a student scans in, the Daily Health Log displays.

Add a Daily Health Log Record

See the [Daily Health Log](#) documentation for information on how to enter Daily Health Log records.
