Report Logic

Reports events where the Date of Incident is on or within report generation date range. State Coded event must have an associated state coded resolution to report any records in the file.

C Records: A record reports for each participant with a role of offender associated with the behavior event. Multiple records can report when multiple offenders are associated with the state coded event.

A record reports per behavior event, per student. When all fields on a record are the same, these duplicate records are removed and only one record reports.

State coded behavior referral events in Draft status do NOT report. Only state coded behavioral referral events in an In Progress, Submitted, or Complete status report.

D Records: Multiple records can report when multiple resolutions are associated with the offender of the state coded event.

- Multiple records can report for each Behavioral Intervention or Instructional Support's on a state coded resolution.
- A record reports for each state coded resolution associated with state coded event resolution information associated with the offender reporting in C record.
- A record reports for each Behavioral Intervention Code associated with the state coded resolution.
- A record reports for each Instructional Support Code associated with state coded resolution.
- A unique record is reported per Local Event ID, State Testing ID, Behavior Code, Behavioral Intervention Code, Instructional Support Code, Disciplinary Sanction Code, and Alternative Education Setting.
- **Note**: There must be a state coded event and state coded resolution in order to report. However, a record is reported when the resolution mapped to the state resolution = NONE.
