MSDS Extracts

Extract	Description
General Collection	The MSDS General Collection Extract is used to gather student data largely from Enrollments, IEPs, and Behavior meant to represent pupil membership counts and participation data.
Early Childhood	The MSDS Early Childhood Extract gathers information about students receiving services through an entity or program funded by the state of Michigan, specifically reporting enrollments and exits for individual programs.
Early Roster	The MSDS Early Roster Extract gathers projected student enrollment data for the upcoming school year. It will not impact accountability and is required to create a Direct Certification report.
Request for UIC	The MSDS Request for UIC allows districts to obtain or validate Unique Identification Codes (State IDs) for their students.
Student Record Maintenance	The MSDS Student Record Maintenance Extract examines student data for changes and general updates throughout the year, particularly for managing graduate data.
Teacher Student Data Link	The Teacher Student Data Link reports the link between students and the teachers who instruct them.
Nonpublic School Student Roster	The Nonpublic School Student Roster extract reports data for actively enrolled students.
