

Detention Scanner

Last Modified on 09/16/2022 12:56 pm CDT

The Scanning toolset is part of the [Campus Workflow Suite](#).

Tool Search: Detention Scanner

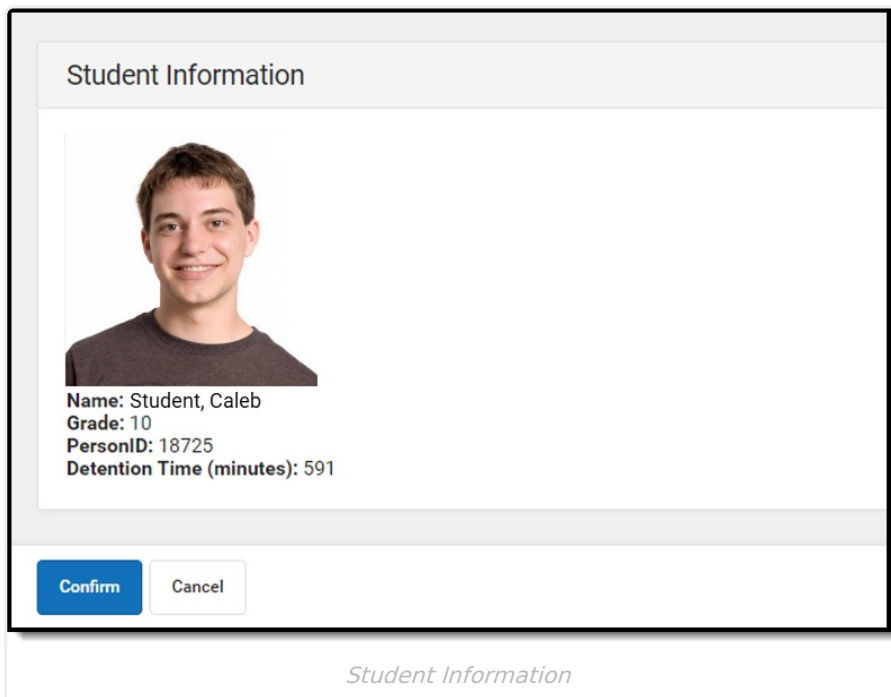

The Detention Scanner tool is used to check students into a detention room. Students can scan ID cards and/or the teacher can manually enter Student ID numbers to take attendance.

The screenshot shows a web interface titled "Detention". It features a text input field labeled "Student Number *" and a blue "Enter" button below it. The interface is contained within a light gray border.

Detention Scanner

Once a student enters or scans in a student ID, the **Student Information** screen displays.

The screenshot shows a web interface titled "Student Information". It displays a student's photo, name, grade, person ID, and detention time. At the bottom, there are "Confirm" and "Cancel" buttons. The interface is contained within a light gray border.

Student Information

The teacher then verifies the student is supposed to be in detention and then clicks **Confirm** or **Cancel**.

When the student re-enters their student ID, the student is checked out of detention and a detention record is created. See the [Detention Tracker](#) documentation for additional information
