# Numerous Tables Being Deprecated from MS SQL Change Tracking

Last Modified on 12/16/2022 11:36 am CST

The New Look of Infinite Campus no longer relies on the Search Framework and MS SQL Change Tracking to keep data in sync for all unified context searches. As a result, MS SQL Change Tracking will be disabled on a number of tables.

> Please note that **MS SQL Change Tracking** is unrelated to the Infinite Campus premium product named Data Change Tracker (DCT).

## When is This Happening?

This change is part of the Campus.2251 Release Pack (December 2022). If you skip this release and apply a release pack greater than Campus.2251, the change will occur with that update.

## Which Tables Will No Longer Be Tracked?

The following tables will no longer be tracked by MS Change Tracking:

| | | |
|---|---|---|
| Address | Household | POSIdentification |
| CampusDictionary | HouseholdLocation | Room |
| Calendar | HouseholdMember | ScheduleStructure |
| Contact | HRDemographics | SchedulingGroup |
| Course | HREmploymentAssignment | SchedulingGroupAssignment |
| CourseCatalog | HREmploymentAssignmentSalary | School |
| CourseMaster | HRPositionCode | SchoolYear |
| Department | Identity | Section |
| District | Lunch | SectionPlacement |
| Employment | Period | StudentContact |
| EmploymentAssignment | Person | Term |
| Enrollment | PersonDistrictIDs | Trial |
| FreeReducedApplication | POSAccount | UserGroup |
| GradeLevel | POSAccountAccess | |

## I Want to Continue Tracking Data for These Table, Can They Be Re-Enabled?

MS SQL Change Tracking is not a dependency for any Infinite Campus product or feature. If Change Tracking is needed for custom purposes, then it should be enabled sparingly, due to the use of significant server resources.
