

# Daily Health Log - Video

Last Modified on 10/21/2024 8:20 am CDT

The daily health log provides a way for districts to document a student's health status on a daily basis. This information is used to determine whether the student can attend class in person, online or have no learning due to illness. This tool can also be used to document the health status of staff or other individuals who have a person record in Campus.

Note that districts may choose to grant parents and students the ability to enter or change Daily Health Log information via Campus Parent/Campus Student.
