The Section Student Detail tool provides a location where districts can collect course-related state reporting data for individual students in a course section. This data is not scheduling-related and can include both localized state reporting data elements provided by Campus (for example, Work Based Learning) and custom [District Defined](#) data elements created by a district administrator. The following outlines the Section Student Detail options that are specific to the state of Indiana.

See the core [Section Student Detail](#) article for information on necessary tool rights, available Ad hoc fields, and guidance on adding and extracting Section Student Detail records.
