The following tools are available for managing Household data for State Edition.

Tool/Article	Description
<p>Census Wizard</p>	<p>The Census Wizard is a three-step process that allows the user to assemble the <u>household</u>, add persons as members to that household, and modify relationships.</p>
<p>Household Information</p>	<p>Census Households allows users to review and edit existing households, create new households (if part of district policy), and add additional information to household data.</p> <p>A household, as used in Infinite Campus, is the designation of a group of people who live in the same dwelling place. It is used for grouping and organization purposes. Households can be as complex or as simple as needed. A household may consist of guardians and students, a group home, a halfway house, or a juvenile detention center.</p>
<p>Address Information</p>	<p>Census Addresses tooling allows users to manage all aspects of addresses within their district (and state). It provides a way to see the household assigned to an address, what school boundaries may exist for the address, and aids in school registration and enrollment.</p>
<p>Online Registration</p>	<p>Online Registration is a customizable toolset in Campus that provides districts with the ability to manage the registration of new and returning students.</p>
<p>State Edition Census Tools</p>	<p>Census tools for State Edition allow users to import course data, staff data, course completion information, section rosters, courses, and contacts.</p>
