Object Triggering Logic

Action	Trigger
Add	When a parent assessment is created. • Scenario: There is a test called A that has a parent called B. If the user removes the parent test B by selecting "(no parent)" in the Parent Test dropList in A, an add event is triggered for A. • Scenario: The scope year is set to the year 14-15. There is a test with a year of 13-14. If the user changes the test year to 14-15, an add event is triggered.
Post	A reporting field is changed and saved on Test Information for reporting data elements Note: Change in descriptor mapping will have to be resynced
Delete	The parent assessment is deleted in Campus. (Note: A record won't send delete as long as there is a child test plan associated with it because of the dependency OR if that assessment is assigned to any student) • Scenario: There is a test called A without a parent. If the user adds a parent test called B, a delete event is triggered for A. • Scenario: The scope year is set to the year 14-15. There is a test with either no year or a year of 14-15. If the user changes the test year to a non-null year other than 14-15, a delete event is triggered
