

Locating Your Campus Version and App Server Information

Last Modified on 01/14/2025 10:41 am CST

Looking Up Your Campus Version | Looking Up Your App Server Name

Looking Up Your Campus Version

To look up your Campus Version:

- 1. Click the User Menu
- 2. Click the **Open** button next to About Campus SIS (see image below)

A window will appear indicating your **Version** (Campus Version). This information is useful when working with Infinite Campus on a Support ticket or when understanding which features are available based on the Campus Version you are currently running.

Looking Up Your App Server Name

Depending on your hosting model, your Campus site may distribute the load across multiple identical servers, known as "Campus app servers." If your district utilizes multiple app servers, your session will be directed to one specific app server at random when you reach the login screen, and you will use that particular server for the duration of your session. If you encounter an issue that seems "random" or "intermittent," it is possible that the problem is occurring only on one app server and not on the others. Therefore, it can be helpful to know which app server you are using when you experience an issue, as this information can assist in troubleshooting.

To look up your App Server information:

- 2. Click the **Open** button next to About Campus SIS (see image below)
- 3. Locate the **Server Name** field. This is the app server you are currently using for your session.
