

Allow-List IPs for 3rd Party Systems

Last Modified on 11/07/2024 11:20 am CST

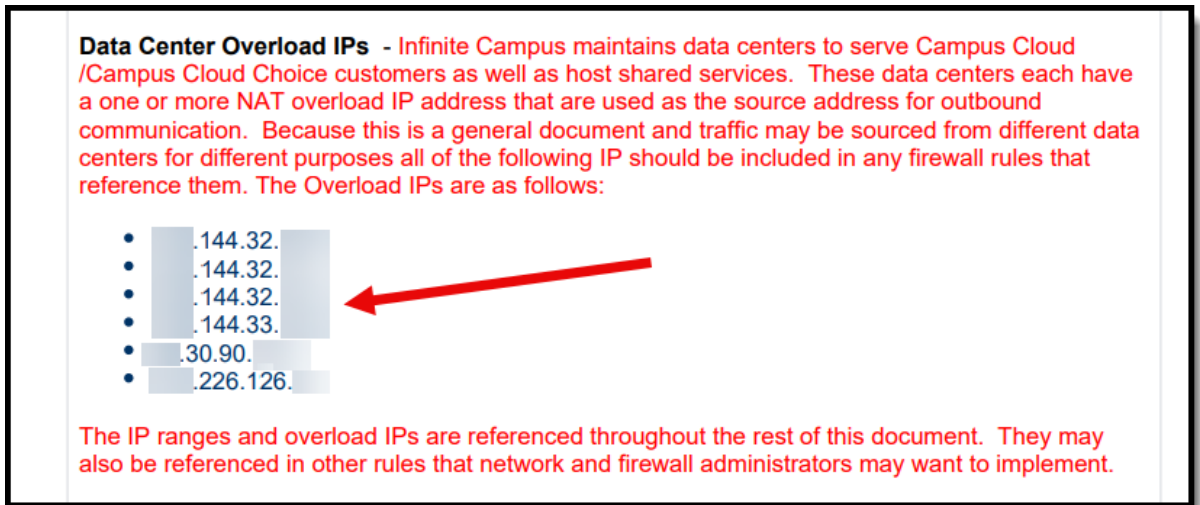

Some tooling (such as the Data Extract Utility, LDAP servers, FRAM Scheduled Imports) connects to a third-party SFTP server and needs to know the list of Campus IPs to which traffic can pass.

To find a list of IPs your third-party systems need to allow-list:

1. Navigate to the [Support Portal](#) (only accessible by Authorized Contacts) and log in.
2. Select Hosting Information > Hosting Documentation
3. Select the appropriate document based on your district's hosting model. A PDF will download to your machine.

4. Open the PDF and navigate to the **Data Center Overload IPs** section.

5. Provide this list of IPs to your third-party system or allow-list them yourself if you have administrative rights to the server.
