

Allow-List IPs for 3rd Party Systems

Last Modified on 11/20/2024 2:27 pm CST

Some tooling (such as the Data Extract Utility, LDAP servers, FRAM Scheduled Imports) connects to a third-party server and needs to know the list of Campus IPs to which traffic can pass.

To find a list of IPs your third-party systems need to allow-list:

- 1. Navigate to the Support Portal (only accessible by Authorized Contacts) and log in.
- 2. Select Hosting Information > Hosting Documentation
- 3. Select the appropriate document based on your district's hosting model. A PDF will download to your machine.

Hosting Documentation
Documents: Network and Firewall Guidance
Network and Firewall Guidance for Campus Cloud and Campus Cloud Choice - Last updated on 05/22/2024 Network and Firewall Guidance for Legacy In-District Hosting - Last updated on 05/22/2024 Network and Firewall Guidance for Self-Hosted Customers - Last updated on 05/22/2024 Network and Firewall Guidance for Virtualized In-District Hosting - Last updated on 05/22/2024
View Documents All Hosting Types

4. Open the PDF and navigate to the **Data Center Overload IPs** section.

5. Provide this list of IPs to your third-party system or allow-list them yourself if you have administrative rights to the server.
