

Error Log (SIF Unity)

Last Modified on 01/21/2026 9:07 am CST

Tool Search: SIF Error Log

The SIF Error Log displays errors for records that failed due to a Campus Error or a SIF error. Users can use this log to help identify potential errors in data setup or bugs in the SIF code.

Errors that are 6 months or older will be deleted.

SIF Error Log

Read - View the Error Log.

Write - Archive or retry Error Log entries.

Add - Provides no function for this tool.

Delete - Provides no function for this tool.

For more information about Tool Rights and how they function, see [this Tool Rights article](#).

Prerequisites

- In order to properly use SIF Unity tools, proper values must be established within the SIF Configuration tool. This ensures Campus is successfully sending data.
- All data setup must be completed for the data to be sent.

Filter Error Log Entries

The Filter option in the SIF Unity Error Log allows users to filter errors by Configuration and/or Object. Only errors matching the filter criteria will display.

Review Details of Error Log Entries

The Error Log lists specific details about each error, including:

Field	Description
Error ID	Displays the Error ID for the record.
Timestamp	Displays the Date and Time the error occurred.
Configuration	Displays the Configuration with which the error is associated.
SIF Object	The object on which the error occurred.
Error Message	Displays the error message that was generated when the record failed. The error message can be expanded for more detailed information.

Field	Description
Action Type	Displays the action of the record: Insert (I), Update (U), or Delete (D).
SIF Response History ID	Displays the Message GUID.

Archive Entries

Users can also archive Error Log entries by selecting an error(s) and archiving it. Once an error is archived, it will no longer appear in the Error Log.
