

# Error Log (SIF Unity)

Last Modified on 12/14/2025 8:45 pm CST

Tool Search: SIF Error Log

The SIF Error Log displays errors for records that failed due to a Campus Error or a SIF error. Users can use this log to help identify potential errors in data setup or bugs in the SIF code.

Errors that are 6 months or older will be deleted.

*SIF Error Log*

**Read** - View the Error Log.

**Write** - Archive or retry Error Log entries.

**Add** - Provides no function for this tool.

**Delete** - Provides no function for this tool.

For more information about Tool Rights and how they function, see [this Tool Rights article](#).

## Prerequisites

- In order to properly use SIF Unity tools, proper values must be established within the SIF Configuration tool. This ensures Campus is successfully sending data.
- All data setup must be completed for the data to be sent.

## Filter Error Log Entries

The Filter option in the SIF Unity Error Log allows users to filter errors by Configuration and/or Object. Only errors matching the filter criteria will display.

Error Log Filters

## Review Details of Error Log Entries

The Error Log lists specific details about each error, including:

Field	Description
<b>Error ID</b>	Displays the Error ID for the record.
<b>Timestamp</b>	Displays the Date and Time the error occurred.
<b>Configuration</b>	Displays the Configuration with which the error is associated.
<b>SIF Object</b>	The object on which the error occurred.
<b>Error Message</b>	Displays the error message that was generated when the record failed. The error message can be expanded for more detailed information.

Field	Description
<b>Action Type</b>	Displays the action of the record: Insert (I), Update (U), or Delete (D).
<b>SIF Response History ID</b>	Displays the Message GUID.

## Archive Entries

Users can also archive Error Log entries by selecting an error(s) and archiving it. Once an error is archived, it will no longer appear in the Error Log.
