

Health Administration Tool Rights

Last Modified on 04/01/2025 1:28 pm CDT

Typically, [Health Administration](#) tools are set up once and rarely require updates. Very few people other than a System Administrator or Health Administrator should need access to them.

This article groups related Health Administration tools together and explains how/where the information they define or describe is used.

For more information about these tools, see the articles in the [Health Administration](#) category.

Conditions and Treatments

Health Office Staff can record students' health conditions and any treatments associated with them in Campus. Treatments given for a student's health condition can be documented in Campus. The Condition Setup, Referring Provider Setup, and Treatment Setup tools define the elements that are used to add this kind of information to student health records. See the [Condition Setup](#) and [Treatment Setup](#) articles for more information.

▶ [Click here to expand...](#)

Condition Setup

Condition Setup is used to define health conditions that can be associated with students in Campus. Typically this list is populated when a district implements Campus and there's rarely any need to change it other than inactivating conditions that won't be used or marking them to allow flagging of the conditions for students that have them. See the [Condition Setup](#) article for more information.

Condition Setup ☆ Student Information > Health Administration > Condition Setup

Immunizations

Typically, Vaccine Setup information is added to Campus per state guidelines and is not changed by district or school users. State requirements for exemptions and compliance labels may vary. See the [Compliance Labels](#), [Vaccine Exemptions](#), and [Vaccine Setup](#) articles for more information.

▶ [Click here to expand...](#)

Compliance Label Setup

Compliance labels are used to indicate whether a student is compliant or non-compliant for an immunization.

Vaccine Setup

Typically, vaccine compliance rules are defined for schools/districts and cannot be changed. Requirements can vary by state.

Office Visits

When capturing student Health Office Visits, the following are used as part of the workflow:

- **Complaint** describes why the student is in the health office.
- **Observation** describes the symptoms or other manifestations staff observe in relation to the student complaint.
- **Intervention** describes actions taken to address the student complaint
- **Discharge** specifies where the student went when they left the health office.

See the [Health Complaint Type](#), [Observation Type](#), [Intervention Type](#), and [Health Discharge Type](#) articles for more information.
