

Error Log Tool Rights

Last Modified on 12/14/2025 8:45 pm CST

The Error Log tool may be used by district and/or state system administrators to view recent activity and errors related to synchronization and messaging.

Users need R rights to view the tool and Generate Report, and D rights to Clear Log.

The screenshot shows the 'Error Log' tool interface. At the top left, it says 'Error Log ☆'. On the right, there is a breadcrumb trail: 'System Settings > Data Interchange Administration > Error Log'. Below the breadcrumb is a 'Related Tools ^' button. The main content area has a blue header 'Data Interchange Error Log' and a sub-header 'Data Interchange Error Log'. Below this, a text box states: 'This report lists the error log entries for the Data Interchange Server (ZIS for SIF) and all other agents.' There is a 'Filter' dropdown menu set to 'ALL entries'. At the bottom of the main content area, there are two buttons: 'Generate Report' and 'Clear Log'. Below the main content area, there is a breadcrumb trail: 'System Settings > Data Interchange Administration > Error Log'.

Suggested User Groups

Typically, users of this tool have already been assigned one or more **Product Security Roles** that grant administrative-level access; therefore, a user group assignment is not necessary. If your district's needs are different, you may choose to create a group that meets those needs.
