

Data Warehouse Tool Rights

Last Modified on 07/09/2025 1:21 pm CDT

Data Warehouse consists of two tools (**Data Options** and **Refresh Settings**) that allow management of standard data warehouse functionality.

The data warehouse is a read-only database that allows optimized access to data for reporting and analysis purposes. The data warehouse periodically flattens views from the live, production database and stores them as part of a backup that can be accessed by reporting tools.

Use of the data warehouse allows a district/state to materialize views into tables, simplify joins, and improve overall reporting and database performance. Views can be added or excluded through use of the Data Options tool.

See the [Data Warehouse](#) articles to learn more about Data Warehouse tools and how they are used.

Data Options

The Data Options tool allows a system administrator the ability to manually add/remove specific database views from being "flattened" by the data warehouse optimization process.

Data Options ☆

System Settings > Data Warehouse > Data Options

 Save

Views moved to the right will be "flattened" during the data warehouse refresh process. Reports that run against a flattened view generate much faster, but the process of flattening a view is database intensive, increases the time it takes to generate the warehouse, and increases the size of the warehouse. It is recommended that users only include views that are used frequently. Views that appear gray are not available for flattening but are, along with the remaining unselected views, still accessible in the warehouse.

Database Views	Views to Flatten
CCS_calendarUnits	activeTrial
CCS_Counselor	attendanceCode
CCS_disability1	calendarStructure
CCS_disability2	cube_attendance
CCS_DV_CustomStudentSummary	cube_behavior
CCS_specialEdSetting	cube_enrollment

09/16/2019 22:02: Processed 8 pages for database 'trumbullDW', file 'newCampus_Log' on file 1.
09/16/2019 22:02: RESTORE DATABASE successfully processed 3101408 pages in 60.241 seconds (402.213 MB/sec).
09/16/2019 22:02: *** Restore completed in 1 minutes
09/16/2019 22:02: *** Running the user defined stored procedure dw_user_postRestore on the trumbullDW database if it exists.
09/16/2019 22:02: dw_user_postRestore has not been defined.
09/16/2019 22:02: *** Cleaning up old and inactive data not needed in the warehouse.
09/16/2019 22:15: Changed database context to 'trumbullDW'.
09/16/2019 22:15: Deleted 434826 Rosters in inactive trials
09/16/2019 22:15: Deleted 380872 SectionPlacements in inactive trials
09/16/2019 22:15: The statement has been terminated.
09/16/2019 22:15: Deleted 0 LessonPlanGroupActivities for sections in inactive trials
09/16/2019 22:15: Deleted 0 LessonPlanActivitySubmissions for sections in inactive trials
09/16/2019 22:15: Deleted 0 SubRosters for sections in inactive trials

Initial Data Warehouse configuration is performed by Infinite Campus Hosting, after which a district/state system administrator can modify the details of the views included in the backup process ([Data Options](#)) and for setting the refresh schedule for data warehouse backups ([Refresh Settings](#)).

Available Tool Rights

Assigning the proper tool rights to users is imperative in keeping information safe and confidential. A limited number of users should have access to the data warehouse and related reporting tools.

Users need RWAD access in order to have full access to Data Warehouse functionality. A Campus system administrator will automatically have access to the data warehouse and reporting options if the **All Tools** checkbox is flagged on his/her [User](#) account.

Data Warehouse Settings Tool Rights

For full access to the data warehouse tool, a user will need full rights (**RWAD**) to the System Administration > Data Utilities > **Data Warehouse Settings** tool right. Granting full rights to this tool right will also grant full rights to the [Refresh Settings](#) and [Data Options](#) sub-rights/tools).

- **Refresh Settings sub-right:** This controls access to the [Refresh Settings](#) tool which allows scheduling and configuration of the data warehouse backup process.
- **Data Options sub-right:** This controls access to the [Data Options](#) tool which allows a user to add/remove the individual database views included in the data warehouse backup.

Task Scheduler Tool Rights

The user will see that a data warehouse task exists as a scheduled task in the [Task Scheduler](#) if he/she has **RWAD** rights to the System Administration > Preferences > **Task Scheduler** tool right.

The data warehouse cannot be configured or scheduled within the [Task Scheduler](#), despite tool rights to this area.

Ad hoc Reporting Tool Rights

When the data warehouse is enabled on a site, it becomes the default data source for all ad hoc reporting, unless a user otherwise selects the "Live" option of the **Data Source** field of a reporting tool. The user will need **R** rights to the **Data Warehouse: Allow Live Data As Source** sub-right for each reporting tool in which he/she should have the ability to select the "Live" database option from the **Data Source** field.

Ad hoc Reporting Tool Rights

This sub-right is not applicable to the [Letter Designer](#) tool.

Suggested User Groups

Typically, users of these tools have already been assigned one or more Product Security Roles that grant administrative-level access; therefore, a user group assignment is not necessary.

If your district's needs are different, you may choose to create a group that meets those needs.
