

Push Notifications Tool Rights

Last Modified on 07/09/2025 1:22 pm CDT

When enabled, users of the mobile portal app who have subscribed to notifications receive push notifications informing them of changes to the student data available in the mobile portal.

See the [Push Notifications](#) article for details.

The screenshot shows the 'Push Notifications' configuration page. At the top, there's a breadcrumb trail: 'System Settings > Portal Preferences > Push Notifications'. Below this is a 'Save' button. The main section is titled 'Portal Options'. It contains a note: 'NOTE: Push Notification is enabled at the district level. Selections made here will apply to all schools. When enabled, users of the mobile portal app who have subscribed to notifications will receive push notifications informing them of changes to the student data available in the mobile portal.' Below the note, it states: 'SSL has been disabled on push notification communications. This setting should not be used for production. Contact a system administrator to enable SSL.' There are three settings: 'Enable Push Notifications' with a checked checkbox, 'Service Status' set to 'Active', and 'Service Connectivity' set to 'Connected'.

Available Tool Rights

Suggested User Groups

Typically, users of these tools have already been assigned one or more Product Security Roles that grant administrative-level access; therefore, a user group assignment is not necessary.

If your district's needs are different, you may choose to create a group that meets those needs.

See [User Groups and Suggested Roles](#) for more information.
