- Updated the import logic to look for:
  - "TRUE", "T", or "1"

Changes to Domain Suffix Preferences in SSO Configuration Not Being Applied After Save (SIS-190532)

SAML - SSO Service Provider Configuration Updates (SIS-190117)

The following updates and improvements were made to the SAML - SSO Service Provider Configuration (https://kb.infinitecampus.com/help/sso-service-provider-configuration) tool:

- The No Domain Suffix Handling option is now called "No change"
- A clear distinction between the Identity Provider half of the screen and the Service Provider

half of the screen.
- The Identity Provider half of the screen is now on top, matching the order you do things in when setting up a new SSO configuration.
- Campus SSO Preferences are now expanded by default, allowing users to better discover that they can strip off the email domain.
- A question mark button was added for the Campus Entity ID that explains that _[sitetype] needs to be on the end of the entityID in non-production environments.
- A question mark button was added that explains the Domain Suffix Handling options.
- Identity Provider Values (IDP Entity ID, IDP URL, IDP Logout URL) are now collapsed by default. These values were confusing for users and caused them to provide these values to the IDP instead of the SP values.
- We now clearly indicate for Service Provider Metadata, Single Sign-On URL, Single Logout URL "This will be generated on Save" when creating a new connection. Previously, we didn't show these until saving and re-selecting the config, so users didn't know these would populate on save.
- We've separated the IDP Certificate Details and SP Certificate Details so people don't confuse them with each other, and we're now calling them "Certificate Details" rather than "Signature"
