LDAP Configuration - Start here

Last Modified on 07/28/2026 4:30 pm CDT

In a district that requires a user management system, Campus LDAP (Lightweight Directory Access Protocol) tools allow Campus users to be linked to LDAP user accounts. LDAP tools enable secure system management and reduce the time a system administrator must spend managing user security tasks.

How-to guides

- Configure Campus for LDAP authentication
- Configure LDAP for multi-forest support
- Configure LDAP for SASL
- Convert existing campus user accounts to LDAP authentication
- Convert LDAP accounts back to Campus-authentication accounts
- Generate a list of LDAP-enabled students/staff
- Configure Google Suite to work with Campus LDAP

Explanation

- LDAP technical components
- LDAP authentication methods
