Medication Name Setup - Start here

Last Modified on 07/28/2026 3:28 pm CDT

The Medication Name Setup tool allows districts to create medication names that populate dropdown lists used by the health staff when recording student health information. A medication is recorded by health staff when students or parents/guardians bring medication to the school's health office for disbursement during school hours. Any medication prescribed to students must be entered here for the health office to properly manage it.
