

Student Constraints Setup - Start Here

Last Modified on 04/14/2026 9:30 am CDT

The [Student Constraints Setup](#) tool allows users to limit a student's interaction in classes with another student, or with multiple students. Constraints are used when loading course requests in the [Scheduling Board](#), and can be either a strict constraint (student WILL NOT be placed) or a not strict constraint (student SHOULD NOT be placed).
