Credit Group Setup - Start here

Last Modified on 07/28/2026 3:28 pm CDT

The Credit Groups Setup tool defines the type of credits earned by students. These credits are counted on transcripts and are used to track a student's progress toward graduation. A Credit Summary that shows the number of credits attempted and earned for each credit type defined in the credit group displays at the bottom of printed student Transcripts. The Credit Summary tool also displays the number of credits a student has earned for each credit type in a credit group.
