Content Security Policy - Start here

Last Modified on 09/23/2026 8:45 am CDT

The Content Security Policy is an additional security directive that is added to the HTTP headers of all Campus pages. This tool allows administrators to control the resources the user agent is allowed to load for a given page. Content Security Policies primarily involve specifying server origins and script endpoints, bolstering system security, especially against cross-site scripting (XSS) attacks.
