Release notes for Campus Payments Terminal

Last Modified on 10/28/2026 9:27 am CDT

The Campus Payments Terminal desktop application brings secure, modern card-present payment processing straight to your workstation. Designed for fast and reliable counter service, it connects directly with your USB card reader to process in-person payments for Fees, Food Service, Activities, Tuition, and Dependent Care.

App Version 1.1.2 (10/28/2026)

Resolved an issue where the warning banner failed to display when the Campus Payments Terminal desktop application lacked access to the device's location. The application now correctly prompts users to enable location access in their Windows settings when the service is disabled, allowing the USB reader to connect.

App Version 1.1.0 (9/30/2026)

Improved diagnostic and support capabilities to help our team investigate and resolve issues more efficiently.

App Version 1.00 (9/21/2026)

A new desktop app, Campus Payments Terminal, is now available to districts that use Online Payments. It connects Campus's Card Present Processing features to a USB-connected Stripe M2 card reader, allowing you to accept in-office payments for Fees, Food Service, Activities, Tuition, and Dependent Care.

Contact your sales representative or client relationship manager for more information about getting a card reader.

For more information about setting up the Campus Payments Terminal, see Install and set up Campus Payments Terminal.
